UI/UX Design

Portfolio

Albertus Pradana / 2024

Hello!

I’m Albert, a UI/UX Designer based in Jakarta with 5+ years of experience across startups, agencies, and corporate projects. Currently at Bank Rakyat Indonesia, I focus on designing solutions for Micro-Segmentation Loans in BRISpot.

For me, design is more than visuals, it’s strategy, empathy, and problem-solving combined. With tools like Figma and Framer, I bring ideas to life with clarity and scalability. Outside of work, I’m constantly learning, exploring emerging technologies, and staying active at the gym to keep balance.

Curriculum Vitae

Education

Information Engineering (GPA 3.37)
Universitas Gadjah Mada

Skills

- Information architecture
- Wireframing
- Design system
- Website & dashboard design
- Mobile app design
- Prototyping
- Usability testing
- Figma
- Adobe XD & Illustrator
- Framer

Experiences

Dec 2023 - present	Product Designer PT Bank Rakyat Indonesia
Jan 2022 - Nov 2023	UI/UX Designer imuni
Sep - Dec 2021	UI Designer Intern BuildWith Angga
Jan - Apr 2021	UI/UX Designer Freelance Pazel Group
Jul - Oct 2020	UI/UX Designer Intern Jakpat

Contents

01 Onex Solana Trading Platform

Transformed a Telegram bot into a full-featured Solana trading terminal with real-time execution and analytics.

02 imuni Mobile App

Built an end-to-end vaccination platform improving registration speed and operational efficiency.

03 Foodie

Designed a meal-planning platform empowering working moms to provide healthy, affordable family meals.

04 Pazel Cloud

Developed a smart POS system streamlining restaurant operations and data management.

Onex Solana Trading Platform

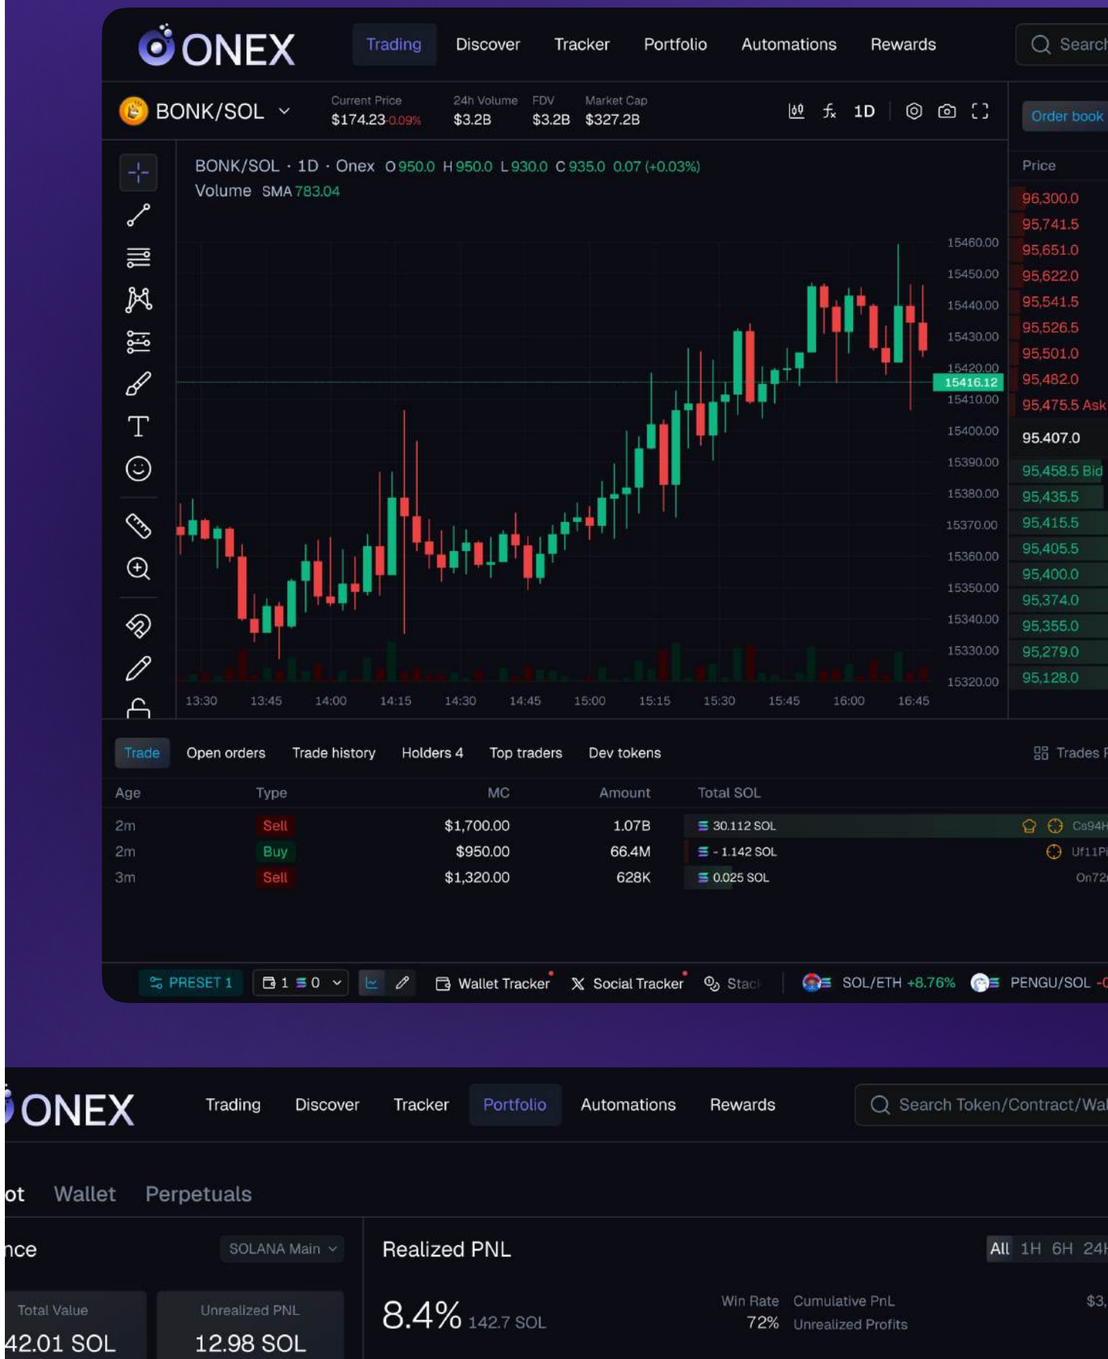
2025 - Web Dashboard

Role: UI/UX Designer (Freelance)

Project Overview:

Onex is a Solana-based trading terminal designed for professional traders who require real-time visibility, precision control, and portfolio intelligence. The product evolved from a Telegram bot into a high-performance web trading platform, providing execution, analytics, and wallet management within a unified interface.

Partnering with LA5 Digital, I led the UI/UX and design-system architecture that transformed Onex into a scalable, data-intelligent platform. The new experience balances execution speed with composure, establishing Onex as a serious contender among Solana trading terminals.



Challenges

Designing a trading terminal means designing for **clarity under volatility**. Users make high-value decisions within milliseconds, yet must process charts, liquidity data, and order flows simultaneously.

01

Density vs. Clarity

How to display complex, fast-moving market data without overwhelming perception or breaking visual rhythm.

02

Speed vs. Stability

How to maintain responsiveness & state feedback under constant data updates without causing visual noise.

03

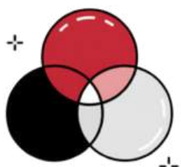
Growth vs. Governance

How to design a scalable system architecture that enables rapid feature expansion while preserving design consistency.

Core design principles

Cognitive efficiency

Every layout decision prioritized mental economy. Information was organized for **fast scanning and low cognitive switching**, ensuring traders could process multiple data layers without friction.

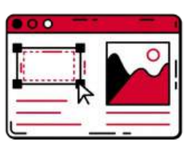


Visual hierarchy

Color, contrast, and spatial rhythm guided focus. Primary actions (which are trade, confirm, and analyze) were designed to be **visually inevitable**, reducing hesitation under pressure.

Action confidence

Micro-interactions reinforced reliability. Real-time feedback, pulse animations, and clear state changes communicated **system responsiveness**, which is critical in volatile markets.



System consistency

The **Onex Design System** unified all modules under shared tokens, spacing, and component logic. Consistency became a strategic asset, aligning design, engineering, and market trust.

Research & references

Before shaping Onex's visual and interaction patterns, I conducted a comparative study of **leading Solana and multi-chain trading terminals**, to understand the principles behind their usability.

Benchmark platforms:

Axiom.trade

Modular layout and data hierarchy for professional trading terminals; set structural reference for execution and workspace organization.

padre.gg

Strong visual rhythm and contrast management; demonstrated how modern dark UIs can remain clear and premium.

vyper.trade

Excellent example of information grouping under volatile updates; guided Onex's approach to real-time data visualization.

gmgn.ai

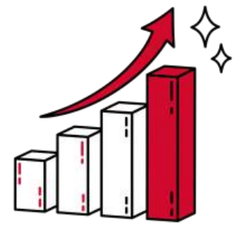
Effective at surfacing token intelligence and social sentiment; inspired the structure of Onex's Token Exploration module.

Information architecture

The platform was structured around three core experience pillars:

Trade, for real-time execution and order control.

Explore, for token discovery and analytics.



Manage, for portfolio and performance tracking.

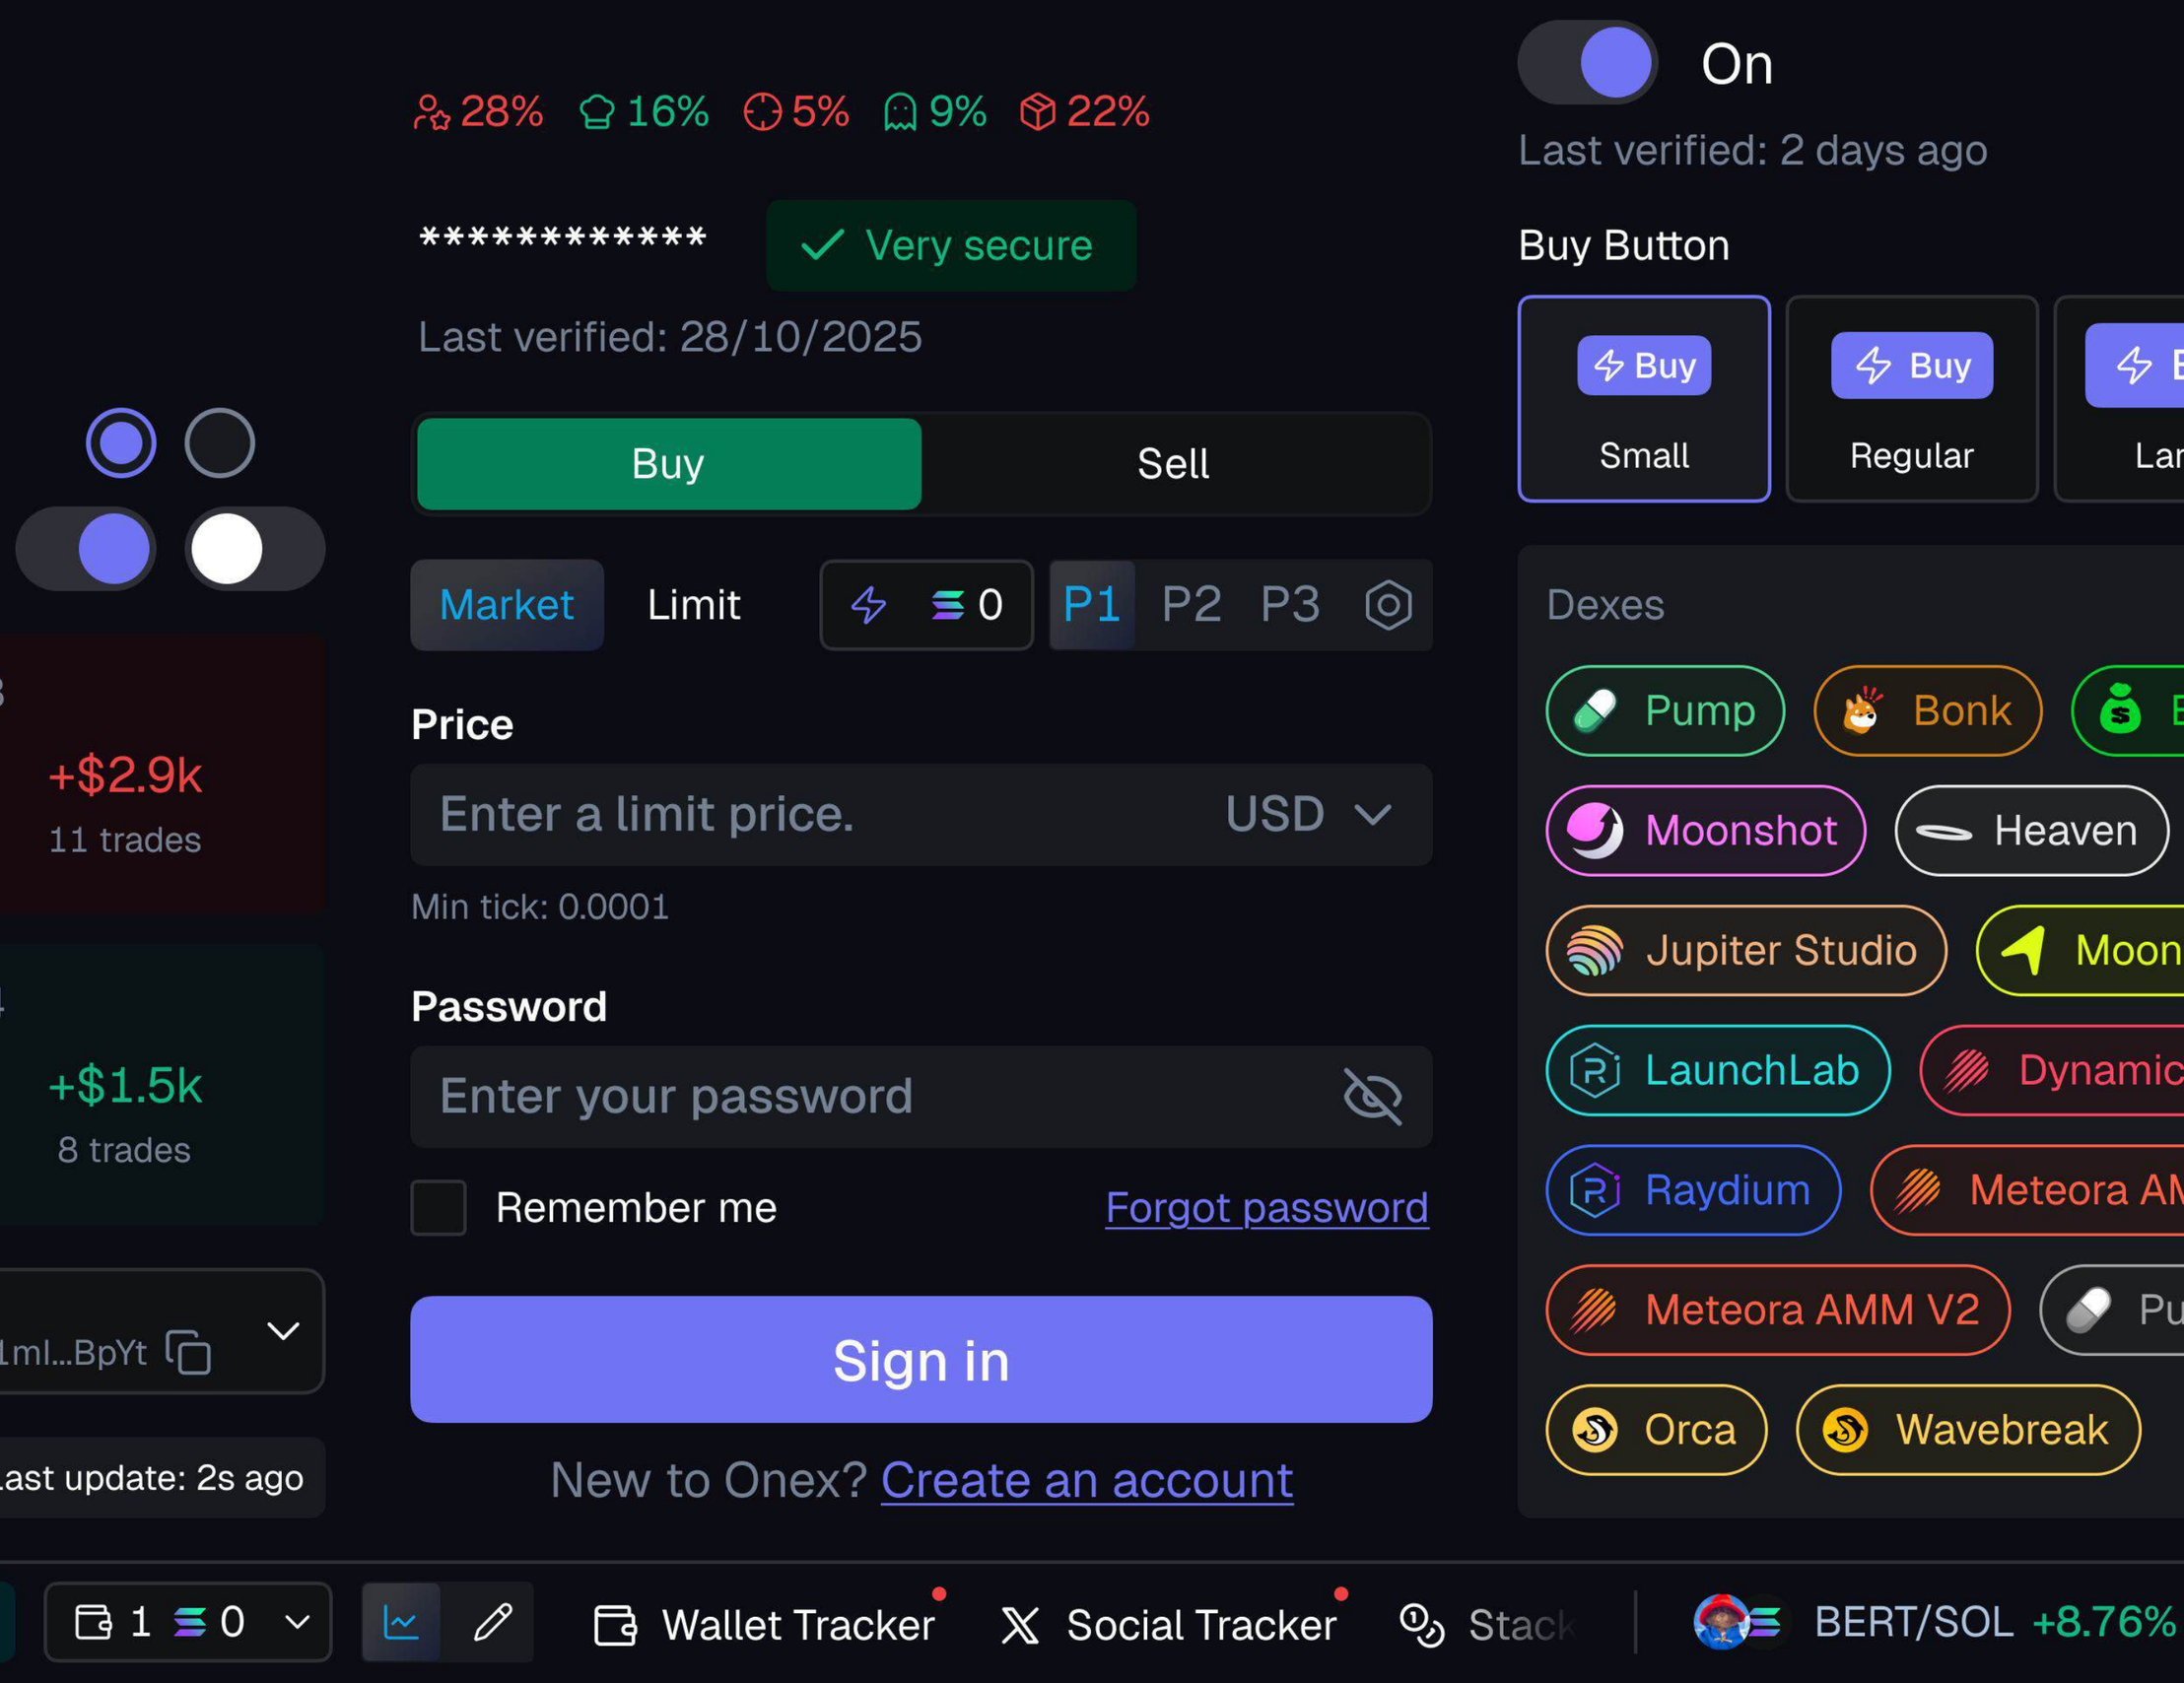
Each pillar operates as an independent module within a global navigation shell, ensuring scalability as new features like Copy Trading or Staking are introduced.

This modular IA minimizes navigation depth while preserving orientation, where traders can move from analysis to action in two clicks.

Design system

The Onex Design System became the product's backbone, by ensuring visual discipline, real-time legibility, and engineering efficiency.

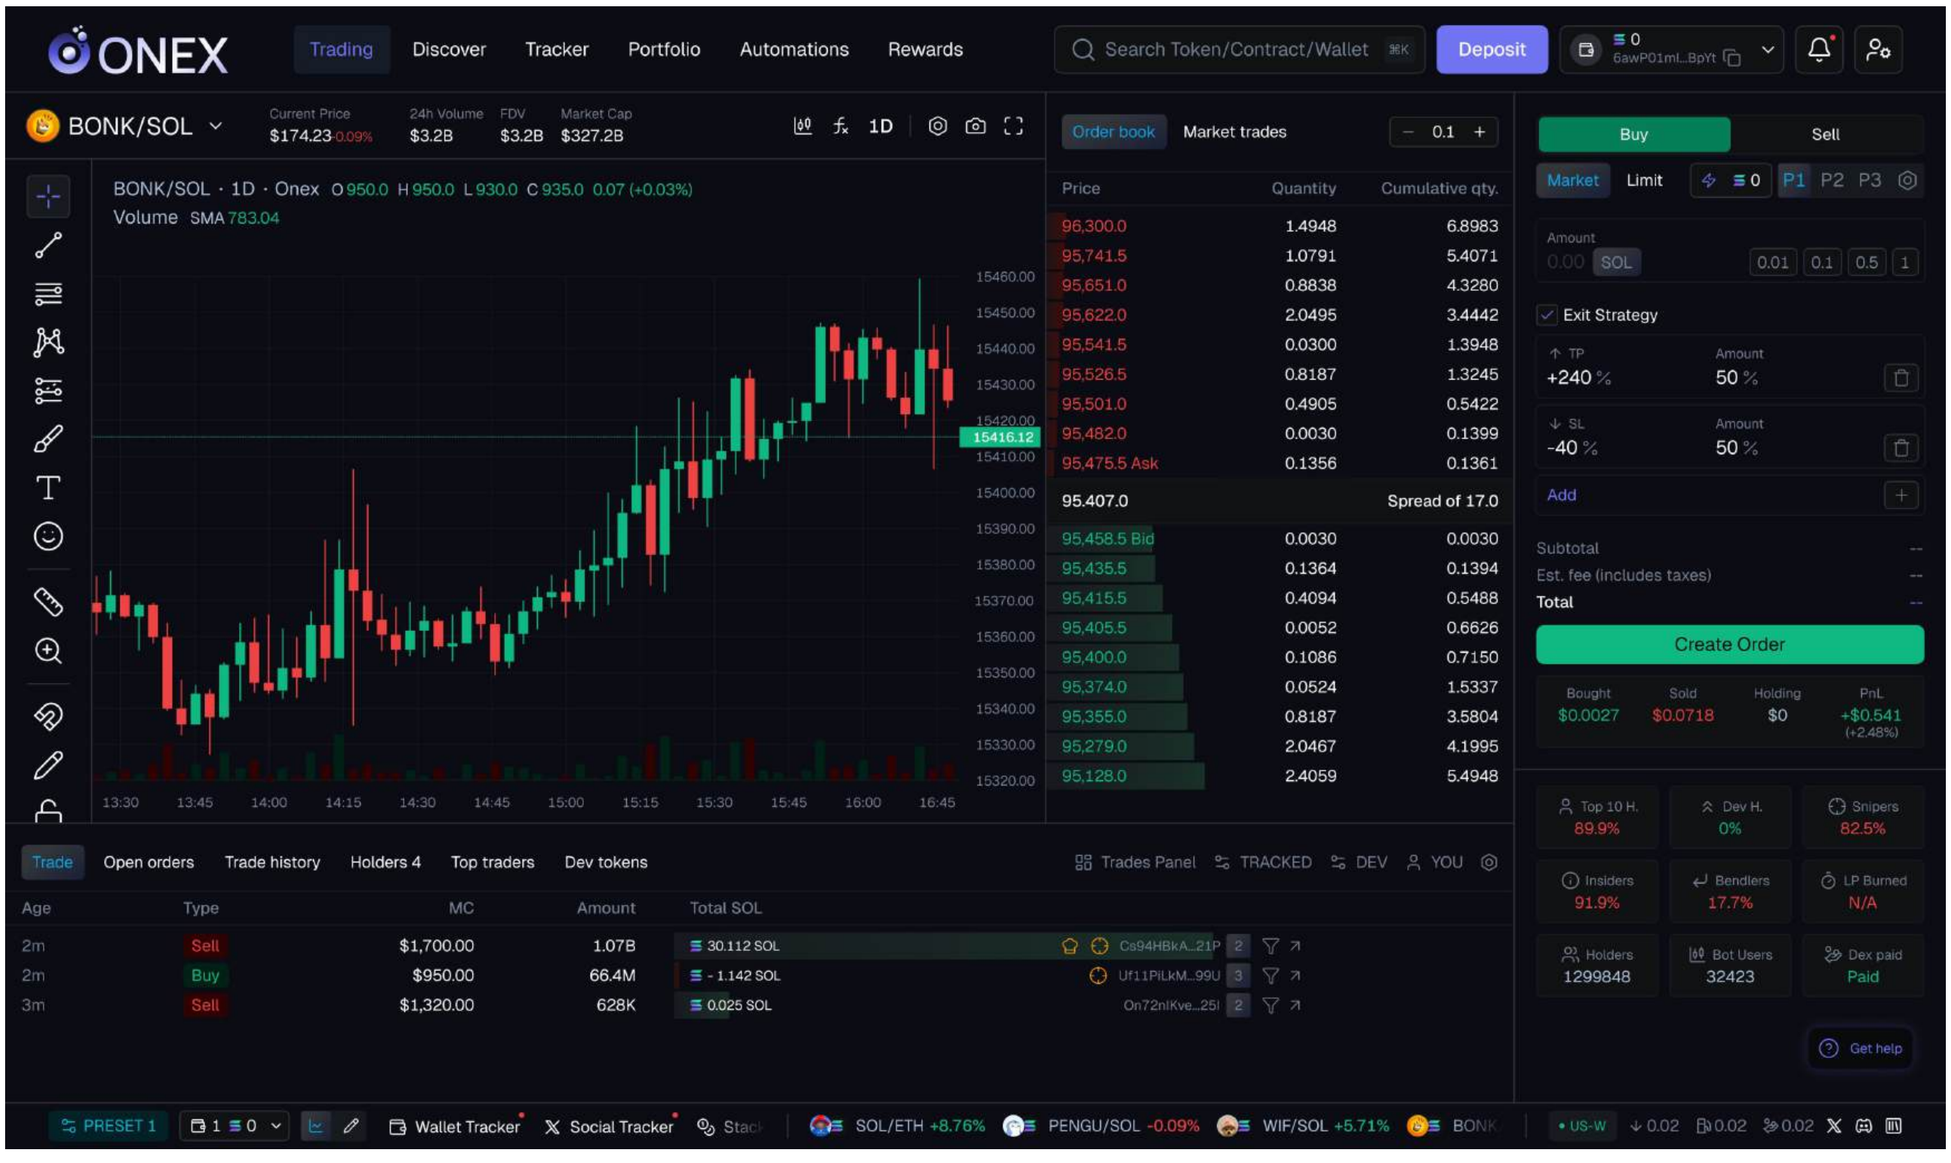
1. Tokenized foundation for colors, typography, and elevation built on an 4-point grid.
2. 60+ reusable components (cards, modals, panels, tables) with state variants for live, loading, and error.
3. Motion principles based on feedback, not flair (to ensure that our traders perceive responsiveness, not distraction).
4. Documented structure for developer handoff with tokens mapped directly to Next.js/TypeScript components.



Results

1. Core Interface: Trading Terminal

The trading terminal serves as the **core decision layer** of Onex, optimized for performance under pressure. The experience moves intuitively from **analysis to execution to validation**, mirroring the trader's mental workflow.



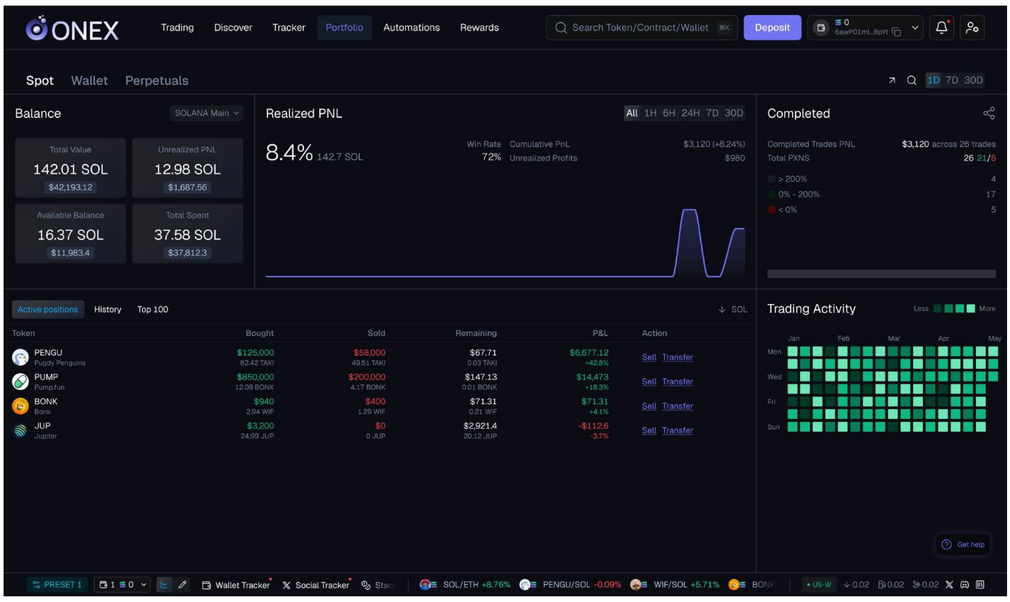
By aligning **charts for context**, **orders for control**, and **trade feeds for feedback**, the system creates a continuous feedback loop that minimizes cognitive switching. A **standardized grid and restrained visual system** transform live data into **coherent rhythm and confidence**.

Results

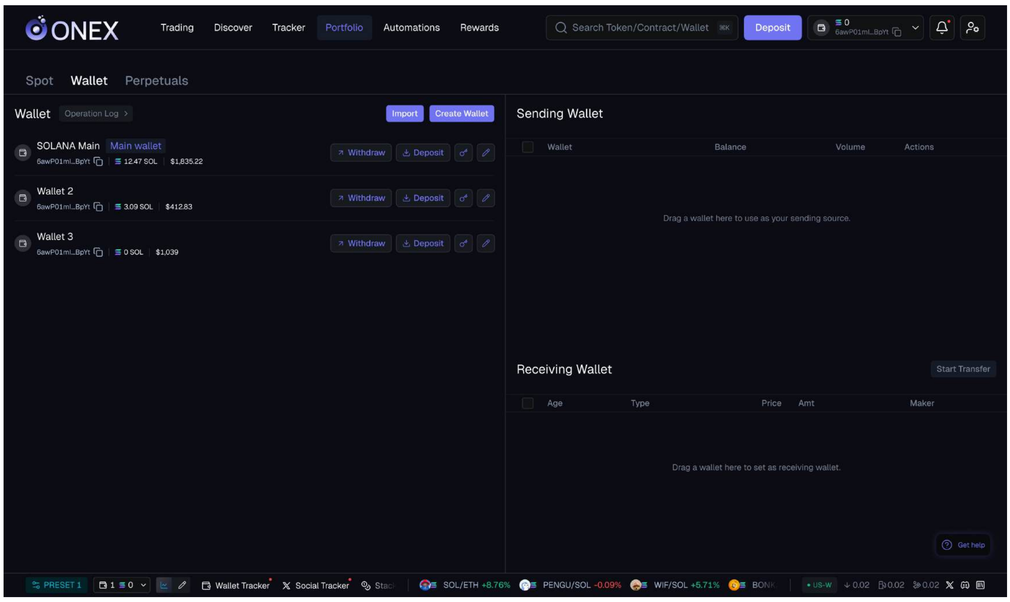
2. Portfolio Management Experience

The **portfolio experience** consolidates every trading dimension: Spot, Wallet, and Perpetuals, into a continuous analytical flow. Users can monitor performance, capital movement, and leverage exposure without shifting context or cognitive mode.

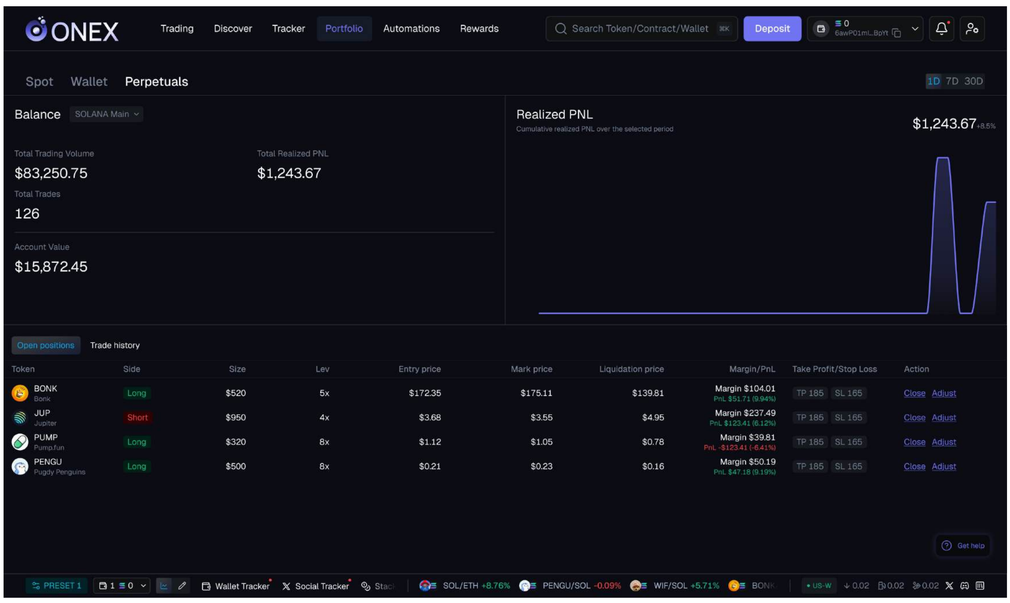
Spot visualizes value distribution and historical rhythm.



Wallet clarifies asset custody and transactional flow.



Perpetuals reveals risk exposure and profit realization in real time.



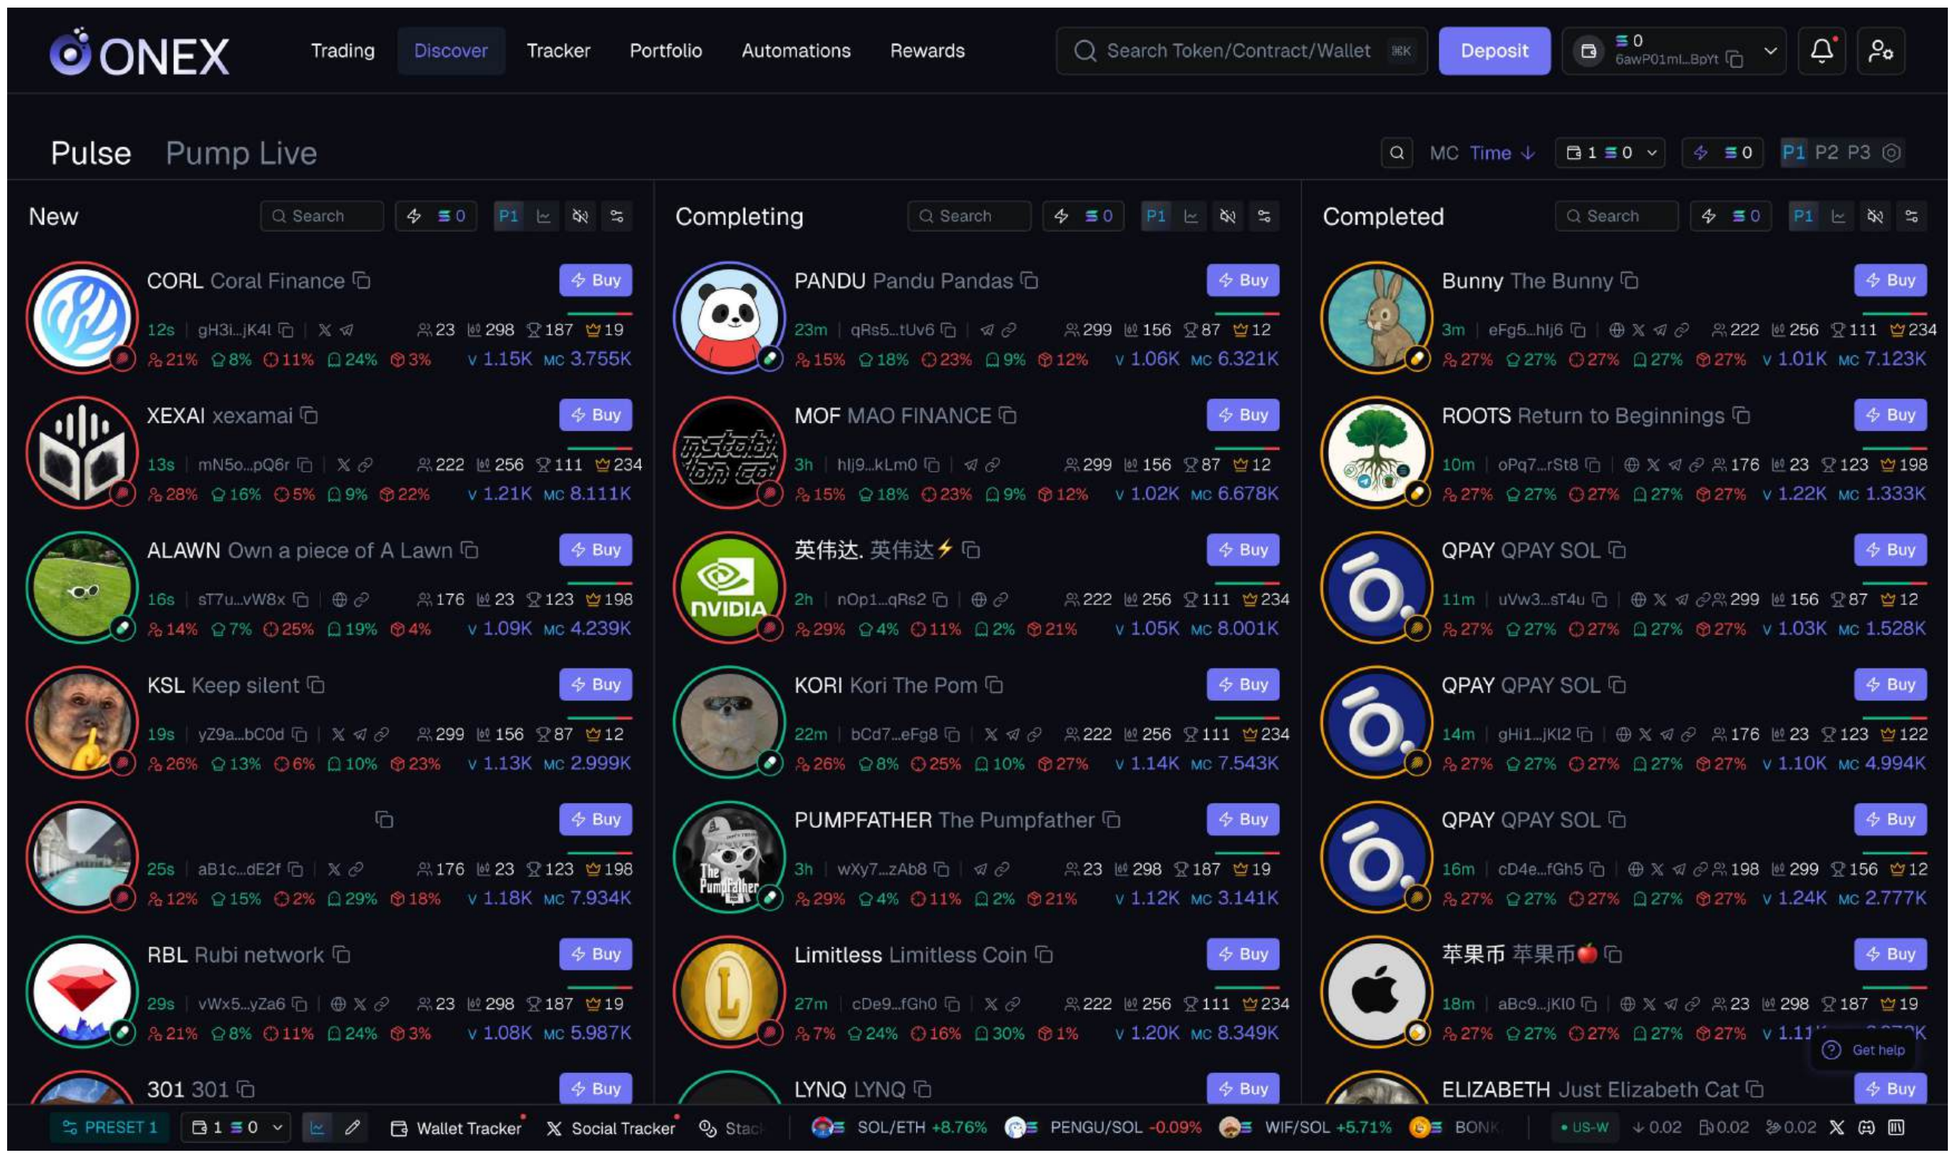
A **unified layout system** ensures consistent spacing, motion, and accent hierarchy, making data transitions feel fluid and predictable.

Results

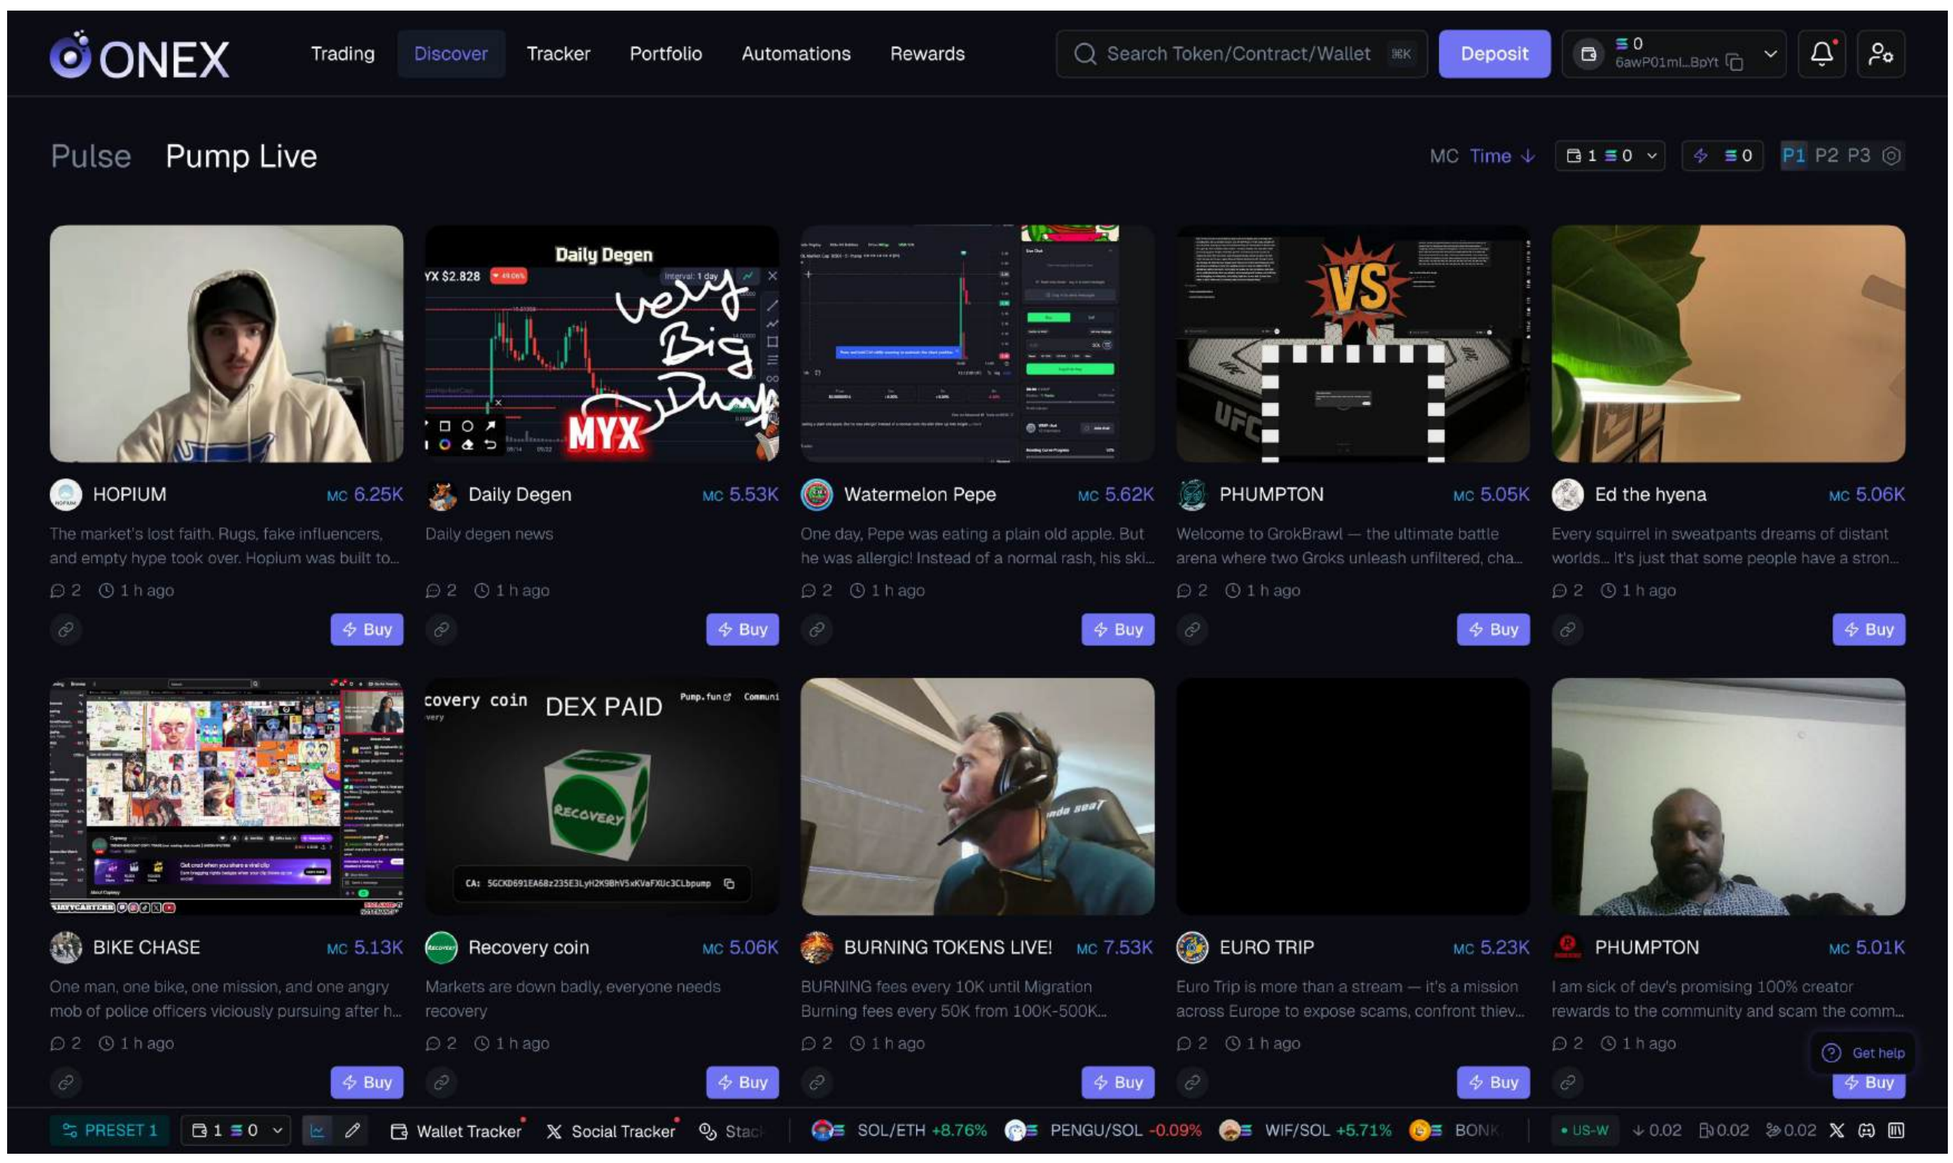
3. Token Exploration & Discovery

The **explore experience** transforms token discovery into a **continuous decision loop**: observe, compare, act. Two integrated layers drive this flow are:

Pulse, a real-time performance feed optimized for scanning



Wallet clarifies asset custody and transactional flow.



A **unified layout system** ensures consistent spacing, motion, and accent hierarchy, making data transitions feel **fluid and predictable**.

Results

4. Ecosystem Extensions & Retention Systems

The fourth layer of Onex expands the platform beyond execution, transforming it from a **trading interface** into a **self-sustaining trading environment**.

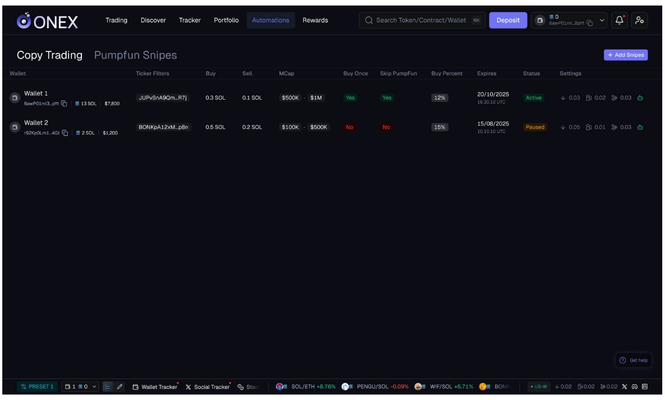
While the Terminal and Portfolio anchor daily activity, these modules focuses on **automation, engagement, and continuity**, ensuring that traders not only trade efficiently but remain meaningfully connected to the ecosystem.

Through structured automations and reward systems, Onex transforms isolated interactions into cumulative progress: turning consistent performance and participation into long-term loyalty.

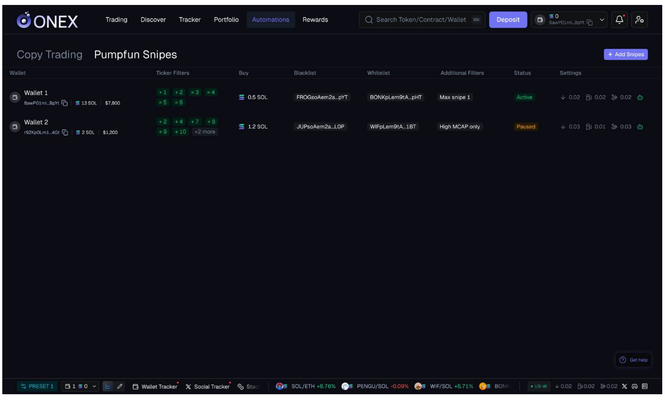
1. Automations: Scaling Performance

The Automations module introduces **Copy Trading** and **Pumpfun Snipes**, enabling users to automate actions and mirror proven market behavior. Each workflow was designed with state clarity, real-time feedback, and risk transparency, allowing automation without abstraction.

Copy Trading enables users to replicate expert trading behavior through defined parameters, transparent risk visibility, and state-based execution.



Pumpfun Snipes automates high-speed entry for new tokens, balancing precise timing with real-time market safeguards.



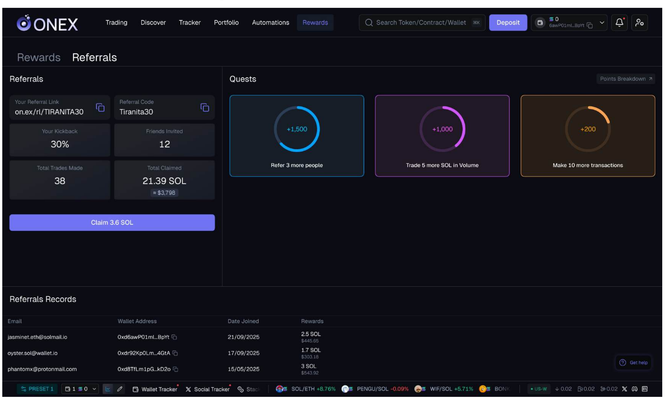
This transforms passive replication into **scalable, confidence-based performance**, where users learn from results, not imitate them.

2. Rewards: Building Engagement

Rewards and Referrals convert trading activity into sustained participation. The structure emphasizes measurable progression: ranks, referral stats, and reward metrics, framed through consistent visual hierarchy and professional tone.

Rewards visualizes trading milestones and incentive tiers, reinforcing engagement through transparent, goal-based progression.

Referrals tracks referral performance and earnings through a credibility-focused dashboard that scales seamlessly with network growth.



Rather than gamification, the system drives **credibility-driven motivation**, where engagement is earned through contribution and trust.

Results

5. Personalization & Trust Infrastructure

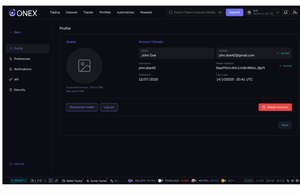
The last layer of Onex reinforces the foundation, ensures that every experience remains personalized, secure, and transparent.

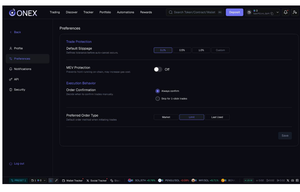
By unifying account management, security controls, and support systems under one cohesive framework, Onex transforms operational trust into a design principle, ensuring users not only act with confidence, but remain actively engaged.

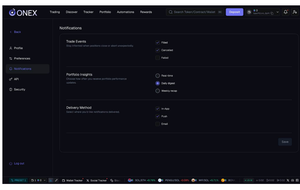
1. Settings: Personalization & Governance

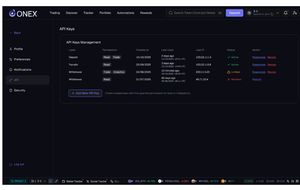
Profile, Preferences, Notifications, API, and Security are unified within one modular layout. This ensures **consistency and navigational continuity** while granting users precise control over their operational context.

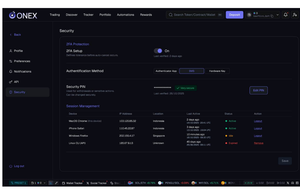
The design reinforces *ownership and composure*, empowering traders to shape their environment without cognitive friction.







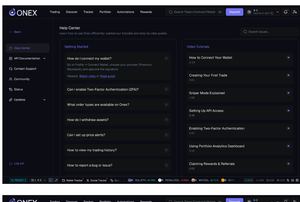


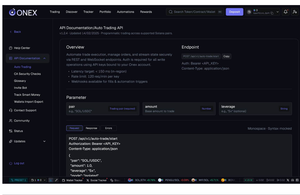


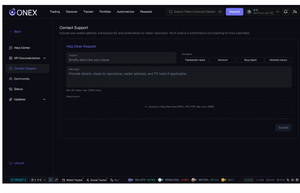
2. Support & Resources: Sustaining Trust

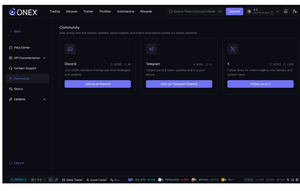
Help Center, API Docs, Contact Support, Community, Status, and Updates pages form the platform's reassurance layer. Their structure prioritizes **information legibility and visual calm**, ensuring clarity during uncertainty.

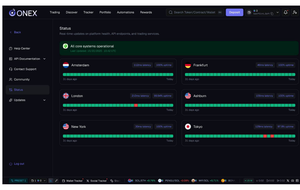
Typography, spacing, and tone are calibrated to reinforce *transparency and platform reliability*, transforming support from a fallback into a trust anchor.

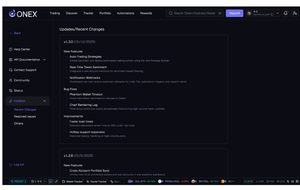


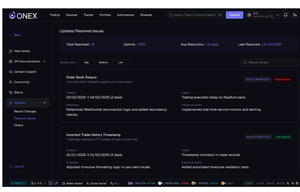












Results & impact

The transformation of Onex from a Telegram bot into a professional trading platform marked a pivotal step in its evolution, shifting from reactive chat-based execution to a **structured, data-rich trading environment** built for professional workflows.

Rather than optimizing what existed, the design effort defined **what the product could become**, architecting clarity, scalability, and operational confidence from the ground up.

Key outcomes:

1. **Ecosystem expansion**

   Reframed Onex from a single chat interface into a **multi-layered trading ecosystem**, integrating execution, portfolio analytics, discovery, and automations within one cohesive architecture.

2. **Unified design system**

   Delivered a **scalable foundation of 60+ components and tokens**, ensuring speed, consistency, and design-to-dev alignment across modules.

3. **Improved trader efficiency**

   Introduced a **streamlined analytical flow** that reduced action switching by over 40%, allowing traders to move from observation to execution in a single viewport.

4. **Information architecture for growth**

   Established modular IA that supports **parallel product expansion** without rework, where each module can evolve independently while maintaining consistency.

5. **Enhanced market positioning**

   The new platform **elevated Onex's brand perception** from utility bot to professional trading terminal, strengthening credibility among Solana's advanced trading community.

6. **Developer velocity**

   Structured Figma-to-code workflow enabled the dev team to **accelerate delivery and reduce design dependencies**, supporting agile iteration cycles.

7. **Visual governance**

   Implemented a **design governance framework** through documented component behaviors, live states, and motion rules, turning design from a static library into a dynamic system.

8. **Investor & partner readiness**

   The platform's new structure provided **institutional-grade presentation and transparency**, preparing Onex for business scaling and third-party integrations.

Key outcomes:

This transformation was less about changing screens, and more about **building an operational model for clarity, trust, and scale**.

Onex now operates as a **complete ecosystem** rather than a single interface, designed to grow, adapt, and sustain user confidence as markets evolve.

> The outcome validated a principle I carry across all data-intensive systems:
> **"When clarity scales, complexity becomes invisible."**

Learnings & reflection

Designing Onex refined my approach to **building systems that stay clear and stable in volatile environments**. I learned to balance real-time responsiveness, data density, and scalability while keeping the experience intuitive, stable, and trustworthy for traders making decisions in seconds.

> Designing complex financial systems isn't about visual elegance, it's about crafting interactions that **communicate stability over style**.
>
> **Every rhythm, transition, and state became a deliberate exercise in reinforcing user confidence through predictable behavior.**

imuni

2022 - Mobile app

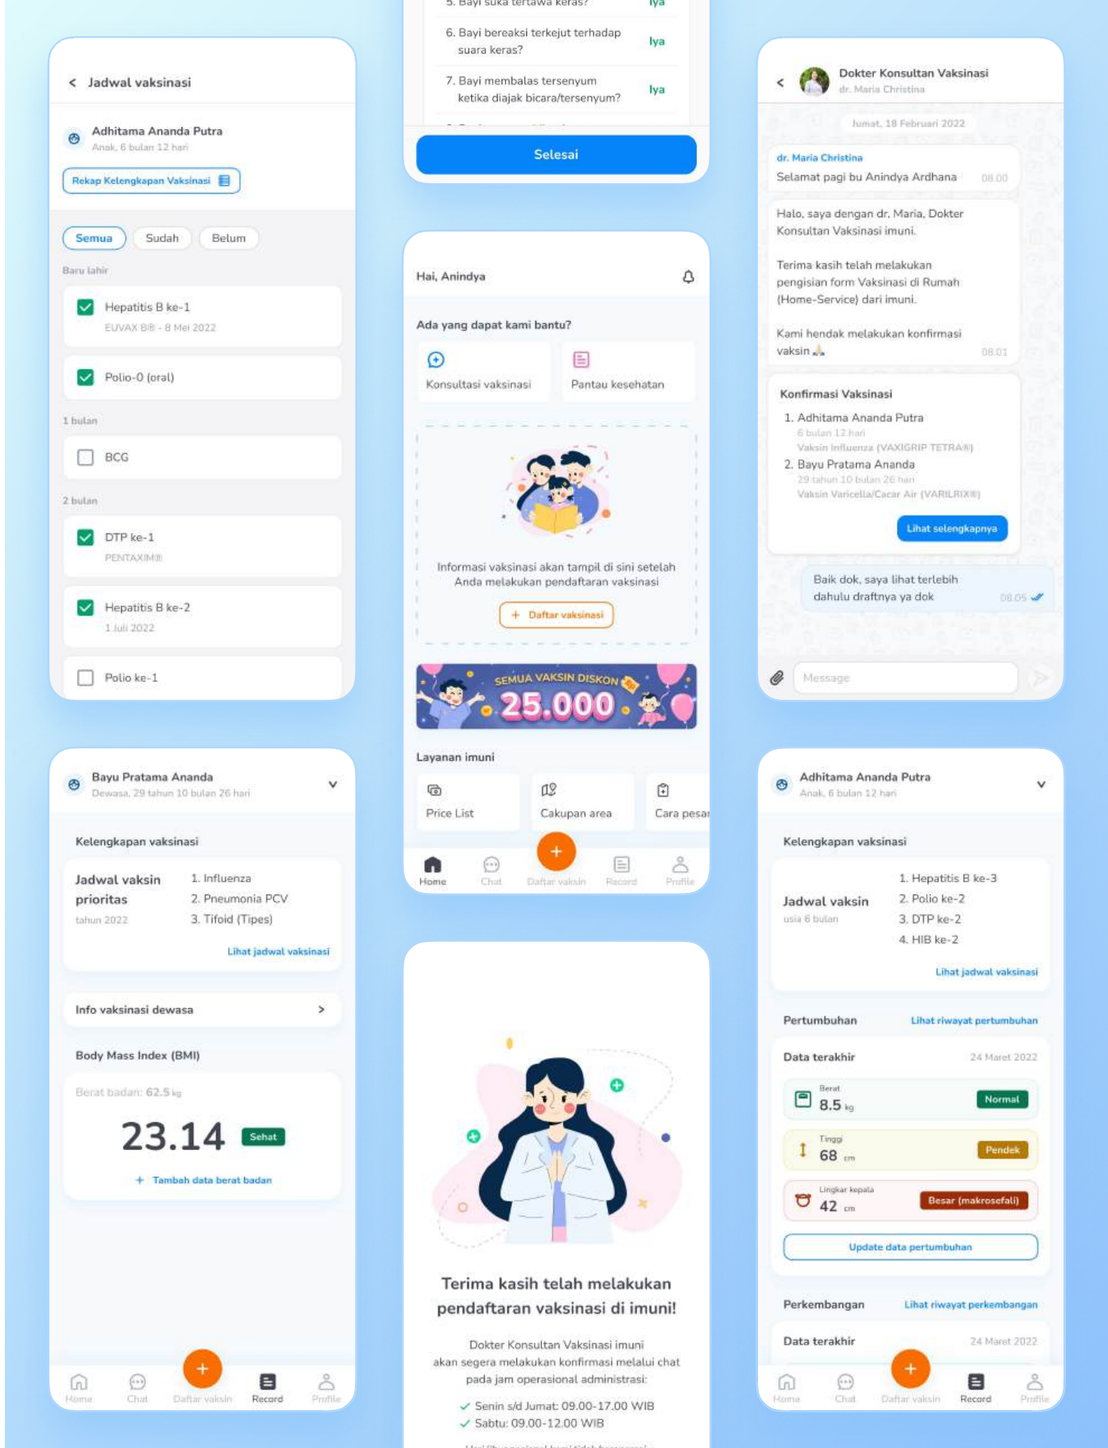
Stakeholders: product manager & company C-level

Background:

imuni, a newborn startup in home-service vaccination, struggled with a manual registration process through Google Workspace and WhatsApp that often frustrated customers.

Objective:

My task was to design the company's very first digital ecosystem, an end-to-end vaccine registration and information platform that simplified the registration journey, ensured clear vaccination information, and transformed the experience into one that built trust and loyalty with customer



How did this project started?

The project began after we recognised the need for a digital system to enhance service quality. Feedback from frontline doctors (who regularly interact with customers) highlighted the need for improvements at various touchpoints.

Current pain points:

Repeated re-registration

Frustration with repetitive forms revealed a clear need for vaccination history tracking to enable **smoother re-registration**.

> “
>
> It’s tedious to fill out the forms every single time.
> Don’t you have a system to track our vaccination history?

Tricky scheduling process

Customer frustration with unclear scheduling revealed a critical need for **transparent and dependable appointment flows**.

> “
>
> My preferred time often changes to match the doctor’s availability.
> It would be better if I only got truly available slots.

Struggling to communicate effectively

Scattered contact points ed to frustration, reinforcing the value of **one unified channel** for all customer interactions.

> “
>
> I get calls from multiple numbers.
> This is confusing, isn’t there a unified number for every department at imuni?

Limited payment options

Customers need better payment flexibility, like instalment plans & e-wallet choices.

> “
>
> I wish there were more flexible payment plans, so I could split the payment with my credit card.

How we operated our services

Since its inception in 2021, imuni has operated its vaccination services as a Minimum Viable Product (MVP) using a suite of digital tools to manage its processes.

For vaccination registrations

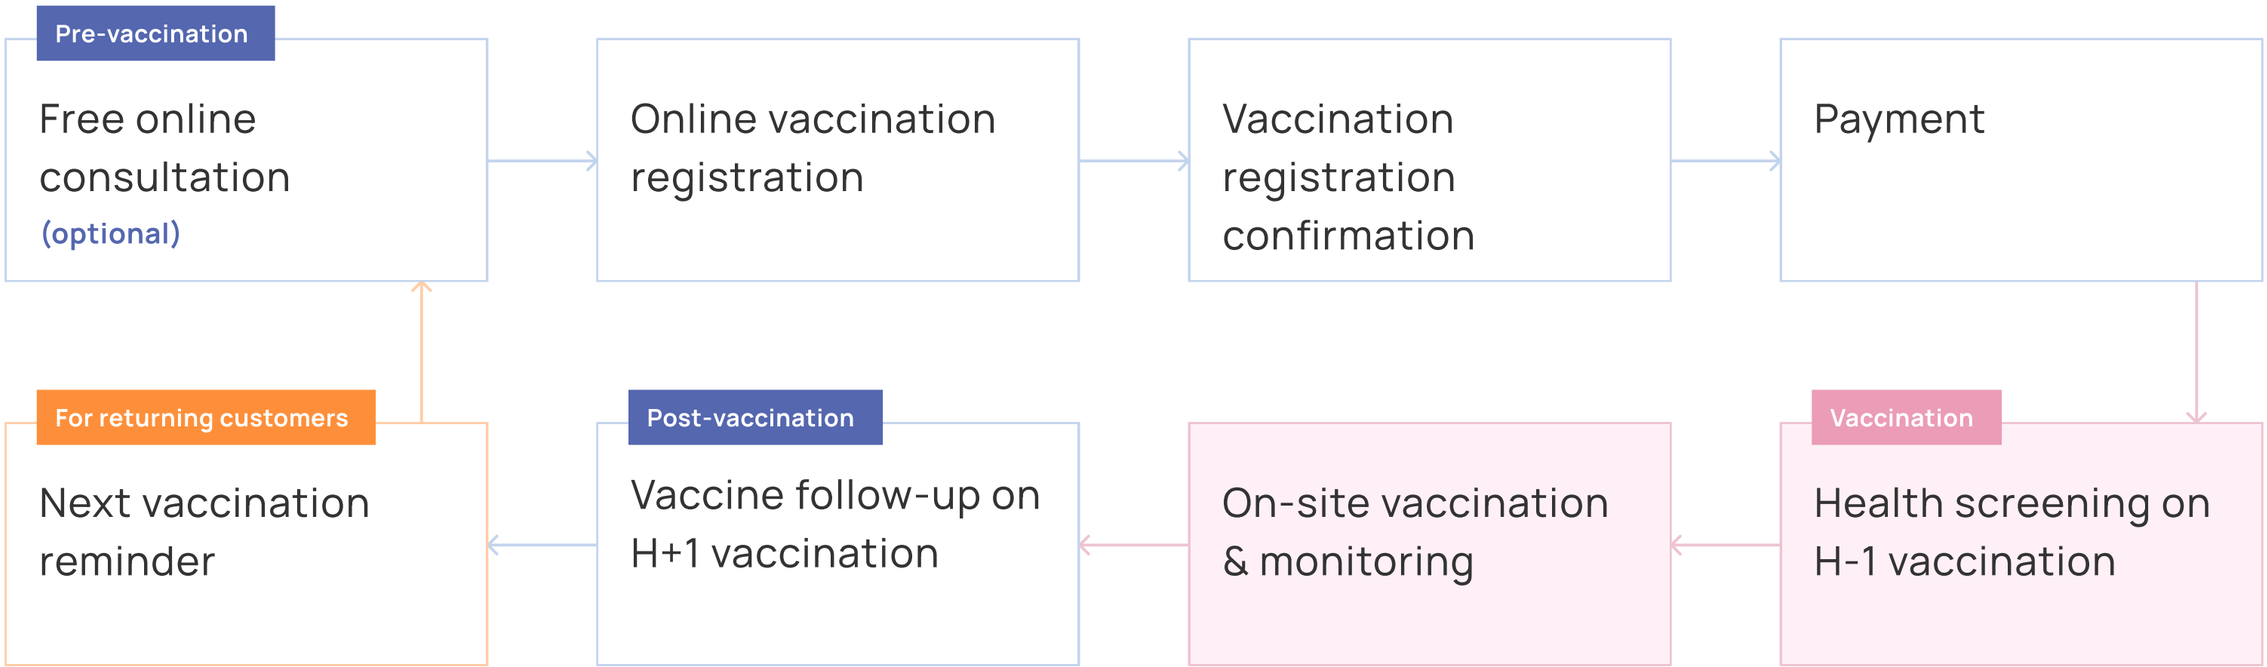
To manage incoming orders

For coordinating vaccination doctors' schedules

As a communication tool between us & customers

Current customer journey

This is how the current journey works, where returning customers have to re-enter all data in the vaccination registration spreadsheet as if they were new customers.



Problem statement

While our existing service operations have successfully provided value to our customers, they lacked the efficiency needed for our growing services, driving the need for digital transformation.

Effects on our customers:

1. **Inefficient processes**

   Customers faced complicated journeys, particularly in:

   - Registration
   - Scheduling
   - Payment.

2. **Communication gaps**

   Ineffective interactions between patients and imuni's team due to too many contact points.

3. **Improper data management**

   Lack of integrated records regarding the patient's vaccination & child development.

Effects on our team:

1. **Data management issues**

   The absence of advanced features led to inefficient data management and analysis.

2. **Scheduling issues**

   Google Calendar was inadequate for scheduling doctors, causing delays.

Characteristics of our customers

Due to time and budget constraints, I couldn't conduct research with our customers. Therefore, I gathered insights from imuni's executives and doctors for insights about our customers.

Age

Mostly young mothers, aged 25-35, with 1-2 infants

Traits

- Well-educated
- Affluent
- Tech-savvy
- Convenience-driven
- Health-conscious

Expectations

Reliable, user-friendly app providing accurate information

Benchmarking against other competitors

While no direct vaccination registration competitors existed at the time, I conducted benchmarking on indirect competitors to learn about industry standards & uncover further opportunities.

PrimaKu

PrimaKu acts as a digital child book with vaccination registration, partnering with the Indonesian Pediatric Society (IDAI) to provide quick and easy access to child health and development information.

Pros:

1. Intuitive and user-friendly design, offering a seamless experience.
2. Comprehensive information on child growth and development, efficiently organized for users.

Cons:

1. Users report delays and bugs when updating data, sometimes resulting in data loss, especially in growth and development tracking.
2. The app can be slow, making it unresponsive and difficult to use.

Vaccination registration	Vaccination information	In-app consultation with a doctor	Child-growth monitoring
✗	✓	✗	✓

Tentang Anak

Tentang Anak offers pregnancy and child growth tracking, doctor Q&A, and health articles, serving as a comprehensive parenting guide for optimal child development.

Pros:

1. Provides extensive information for parenting, serving as an all-in-one tool.

Cons:

1. The UI can seem outdated and not very user-friendly.
2. Certain features may be too complex, requiring more expertise to use effectively.

Vaccination registration	Vaccination information	In-app consultation with a doctor	Child-growth monitoring
✓	✓	✓	✓

Main features in our app

We looked at two things: the services we already provide and what our customers truly need. From this, we identified opportunities to go beyond basic vaccination registration and introduce new features that make the app more comprehensive, user-friendly, and aligned with customer expectations.

Streamlined vaccination registration

Improved communication (single communication channel)

Flexible payment options

Digital vaccination records

Health Monitoring (for both children and adults)

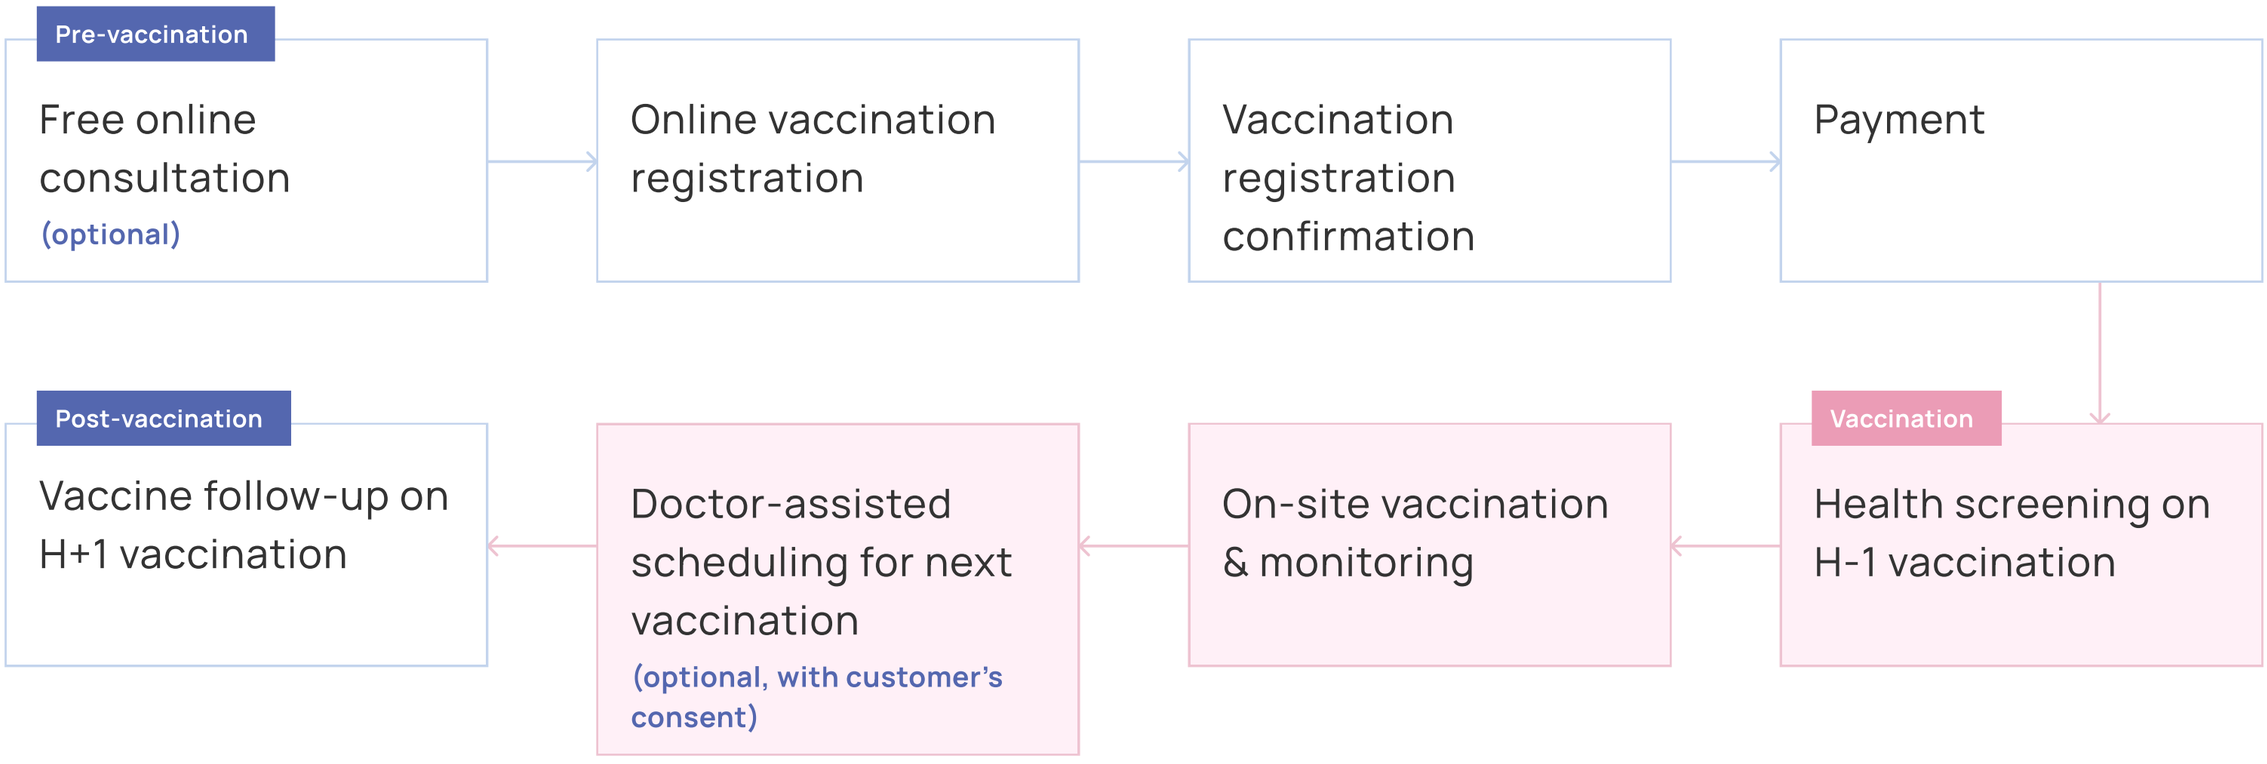
Streamlined next vaccination reminders

While the project spans both dashboard web and mobile platforms, this writing highlights the **end-to-end vaccine registration flow** on the imuni mobile app.

New customer journey

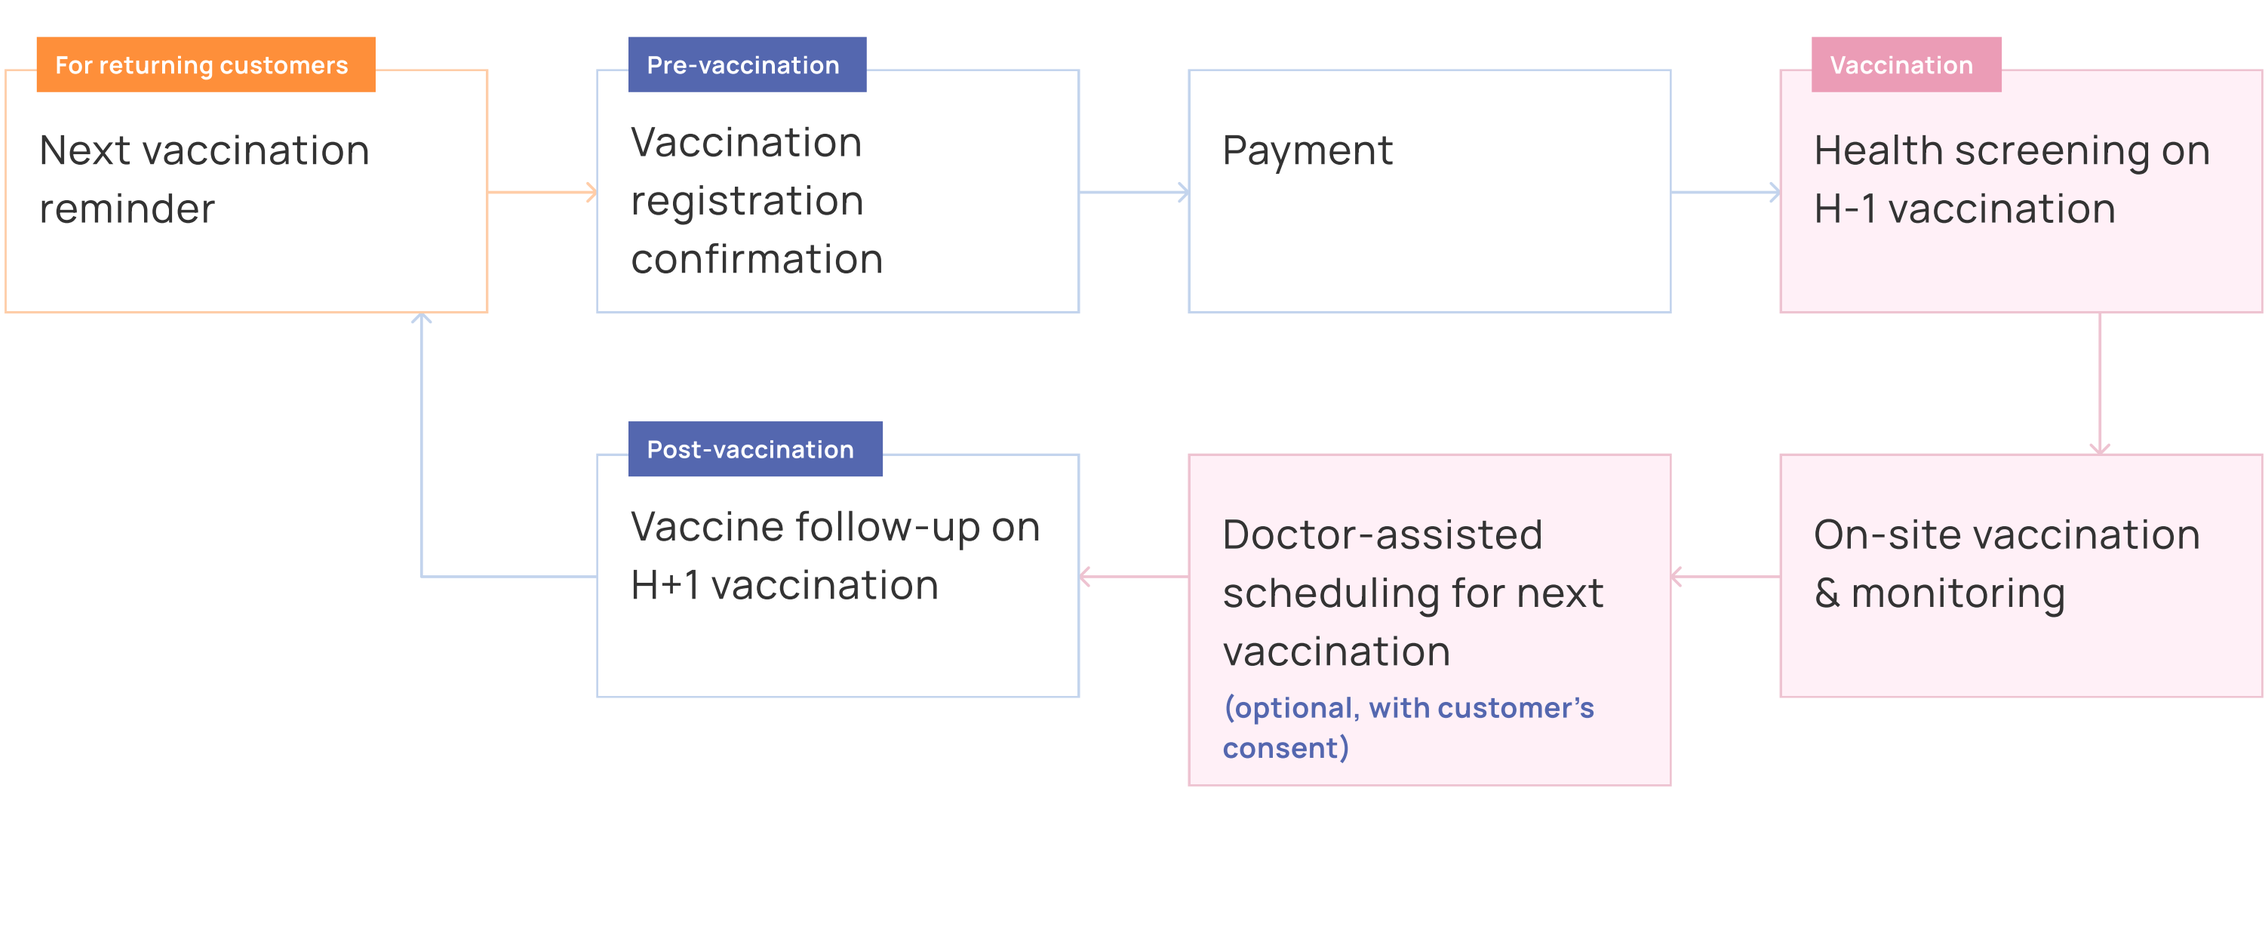
Through careful analysis, we realized not all users experience our service the same way. New users without vaccination records need a different journey compared to returning customers with saved data. To address this, we mapped out two distinct journeys: one for First-Time Customers and one for Returning Customers.

First-Time Customers



Returning Customers

For returning customers, this updated journey eliminates repetitive steps by allowing them to confirm their next vaccination (pre-scheduled by doctor with their consent) without needing to re-register.



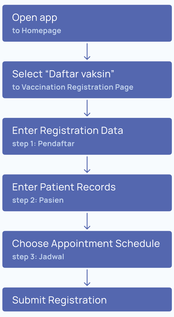
Results

Highlight 1: Optimized vaccination registration

The existing vaccination registration using Google Forms required substantial effort and often led to errors, resulting in negative user experiences.

We improved this by storing previous data and automating form completion to simplify the process.

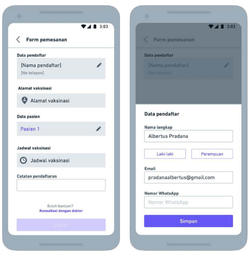
User Flow



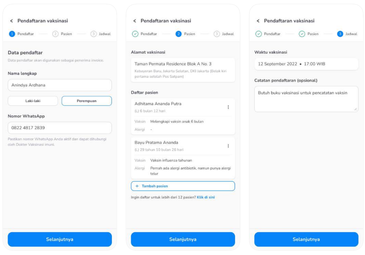
Design process

1. Overview of Vaccination Registration

Wireframe



Hi-fi design



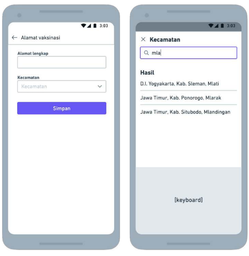
Designed for ease, the vaccination registration is split into 3 straightforward sections:

1. **Registration data:**
   Gathers essential customer info—name, gender, and WhatsApp—for invoicing purposes.
2. **Patient records:**
   Collects key patient data (name, gender, age, selected vaccine, allergies, and vaccination address) to support vaccine & logistics prep .
3. **Vaccine appointment schedule**:
   Enables users to select available time slots, aligning schedules efficiently on both ends.

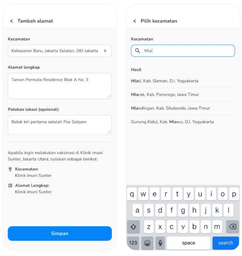
Users can submit their registration after completing the form, streamlining the process compared to manual methods.

2. Vaccination Address Details

Wireframe



Hi-fi design (add new address)



Hi-fi design (choose existing address)

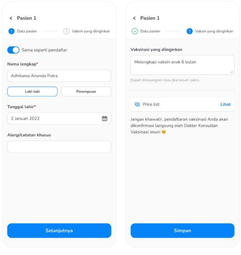
The vaccination address section simplifies location input through 3 key features:

1. **District selection:**
   A smart search lets users type just 3 characters to quickly find and select their district.
2. **Address input:**
   Users can enter their full address (and landmarks, if any) to help doctors locate them easily —or use our clinic's address if they prefer to visit us instead.
3. **Saved addresses:**
   Users may also select from previously saved addresses for faster registration.

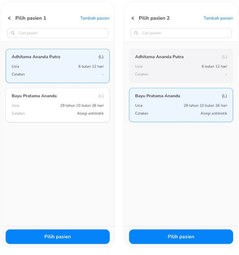
3. Patient Records

Wireframe

Hi-fi design (add new patient)



Hi-fi design (choose existing patient)



This section is built to streamline the input of vaccination-related patient data:

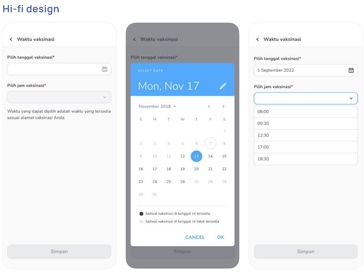
1. **New patient entry:**
   Users enter full name, gender, age, and allergies—ensuring complete medical records.
2. **Reuse existing data:**
   Returning users can select from saved patient profiles and update vaccination details—reducing repetitive work.
3. **Vaccination selection:**
   Users can fill in their preferred vaccines or vaccination purposes. Updated pricing information is also displayed for transparency.

This setup ensures accurate data capture while saving time and enhancing overall usability.

4. Vaccine Appointment Schedule

Wireframe

Hi-fi design



To schedule a vaccination, users first select a preferred date. The system filters available dates based on the chosen district. Once a date is selected, users can choose a time slot from the available options.

This two-step flow ensures a clear and streamlined scheduling experience.

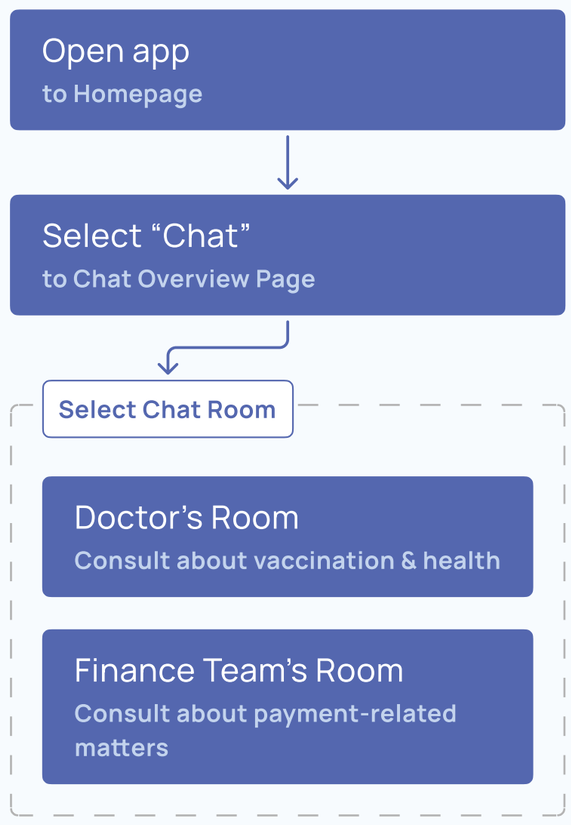
Results

Highlight 2: Improved communication through a single, unified channel

Previously, users had to coordinate with three separate contacts (consulting doctor, finance team, and vaccinating doctor) which complicated the process.

With centralized in-app chat, communication is now streamlined for a smoother consultation experience.

User Flow

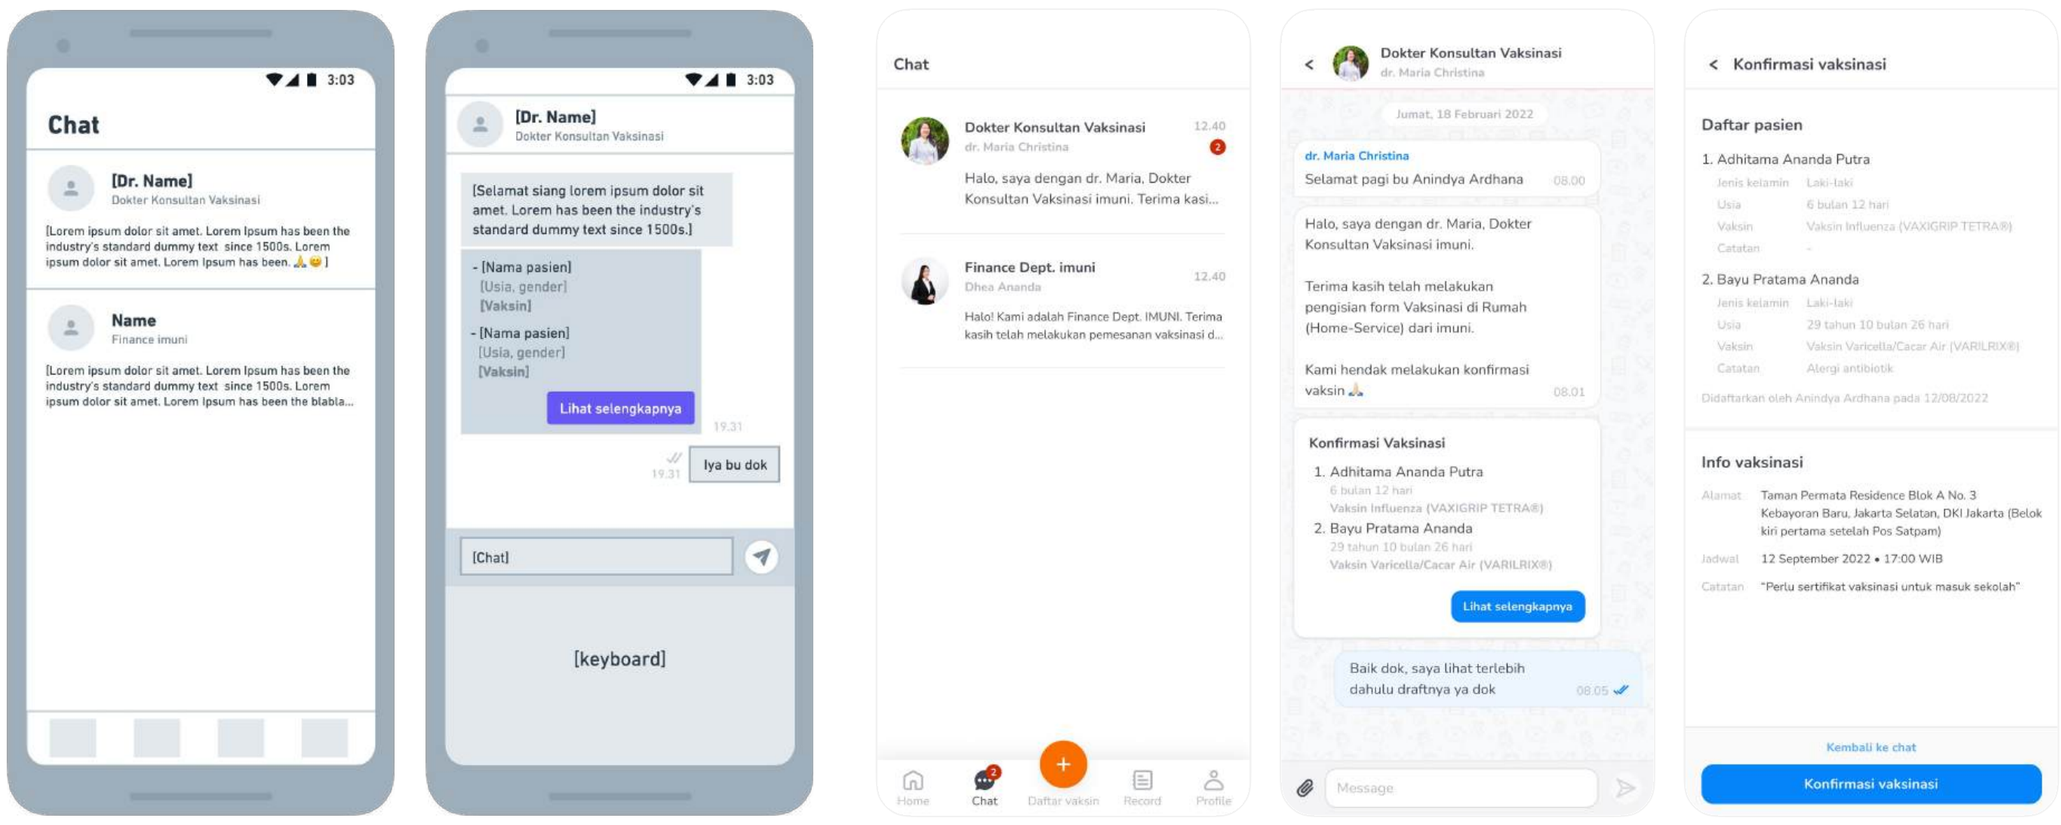


Design process

1. Centralized Chat Communication

Wireframe

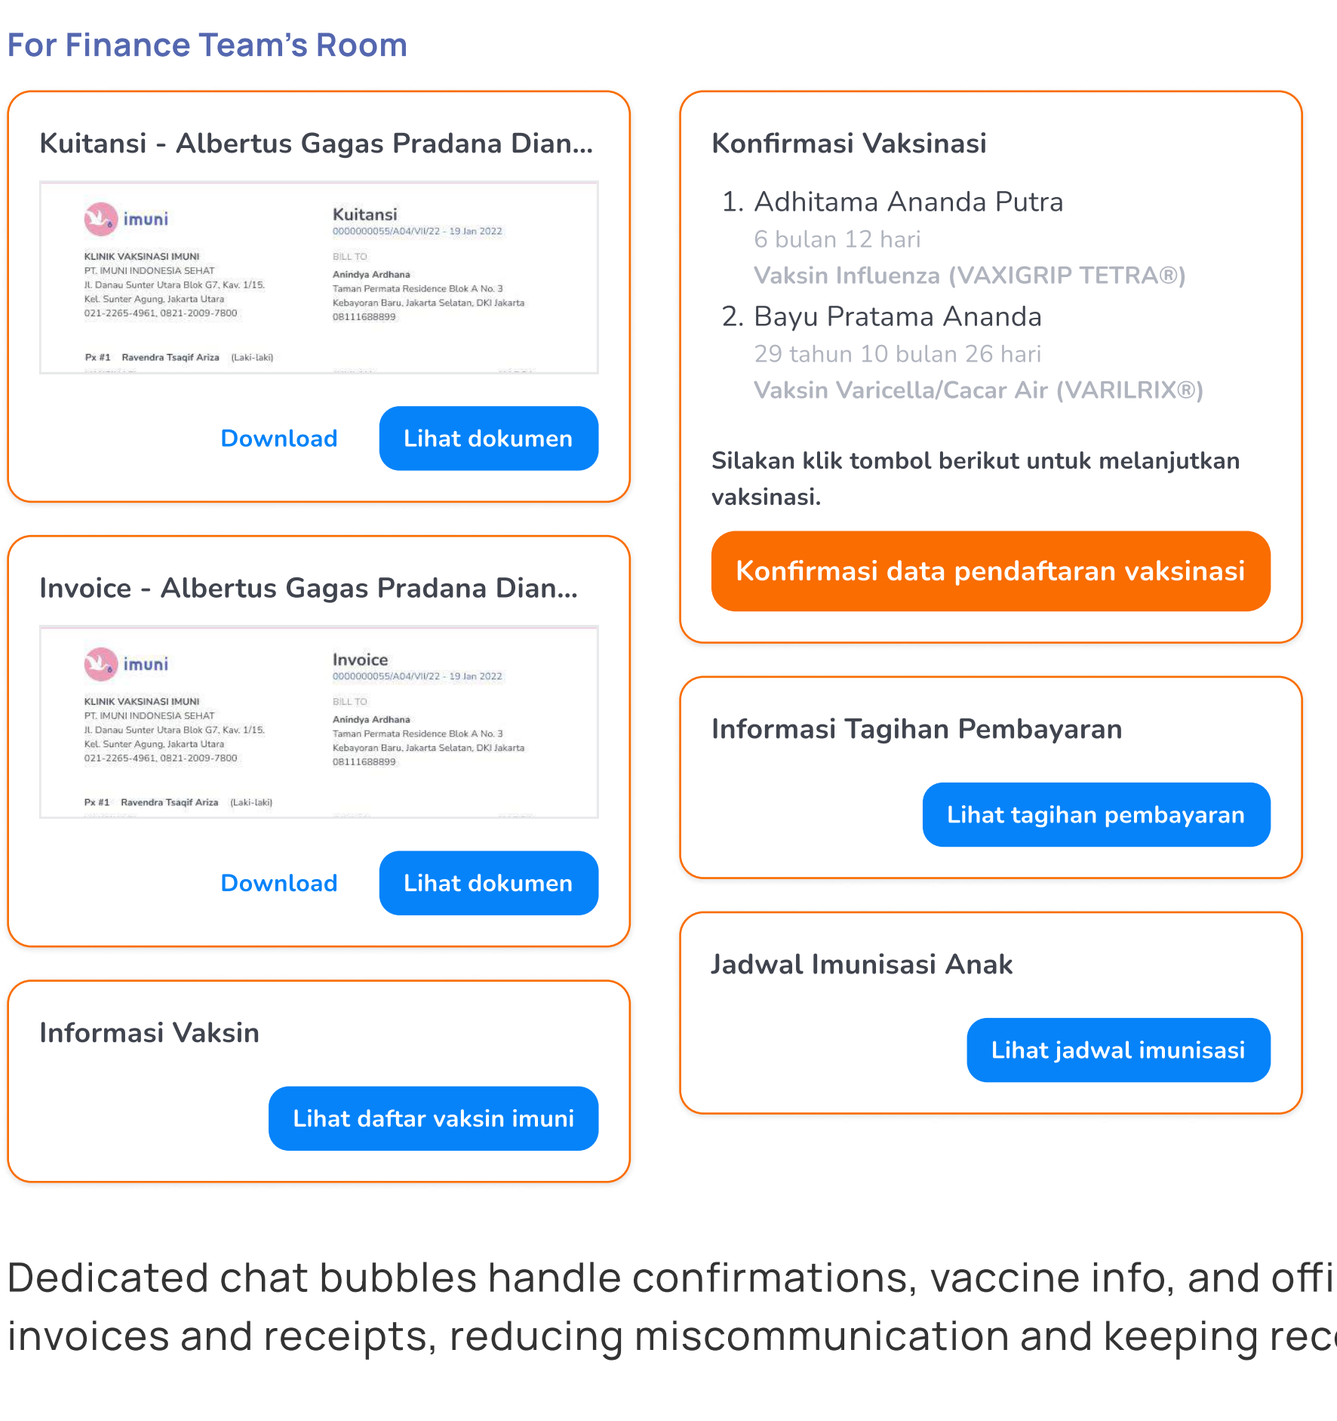
Hi-fi design



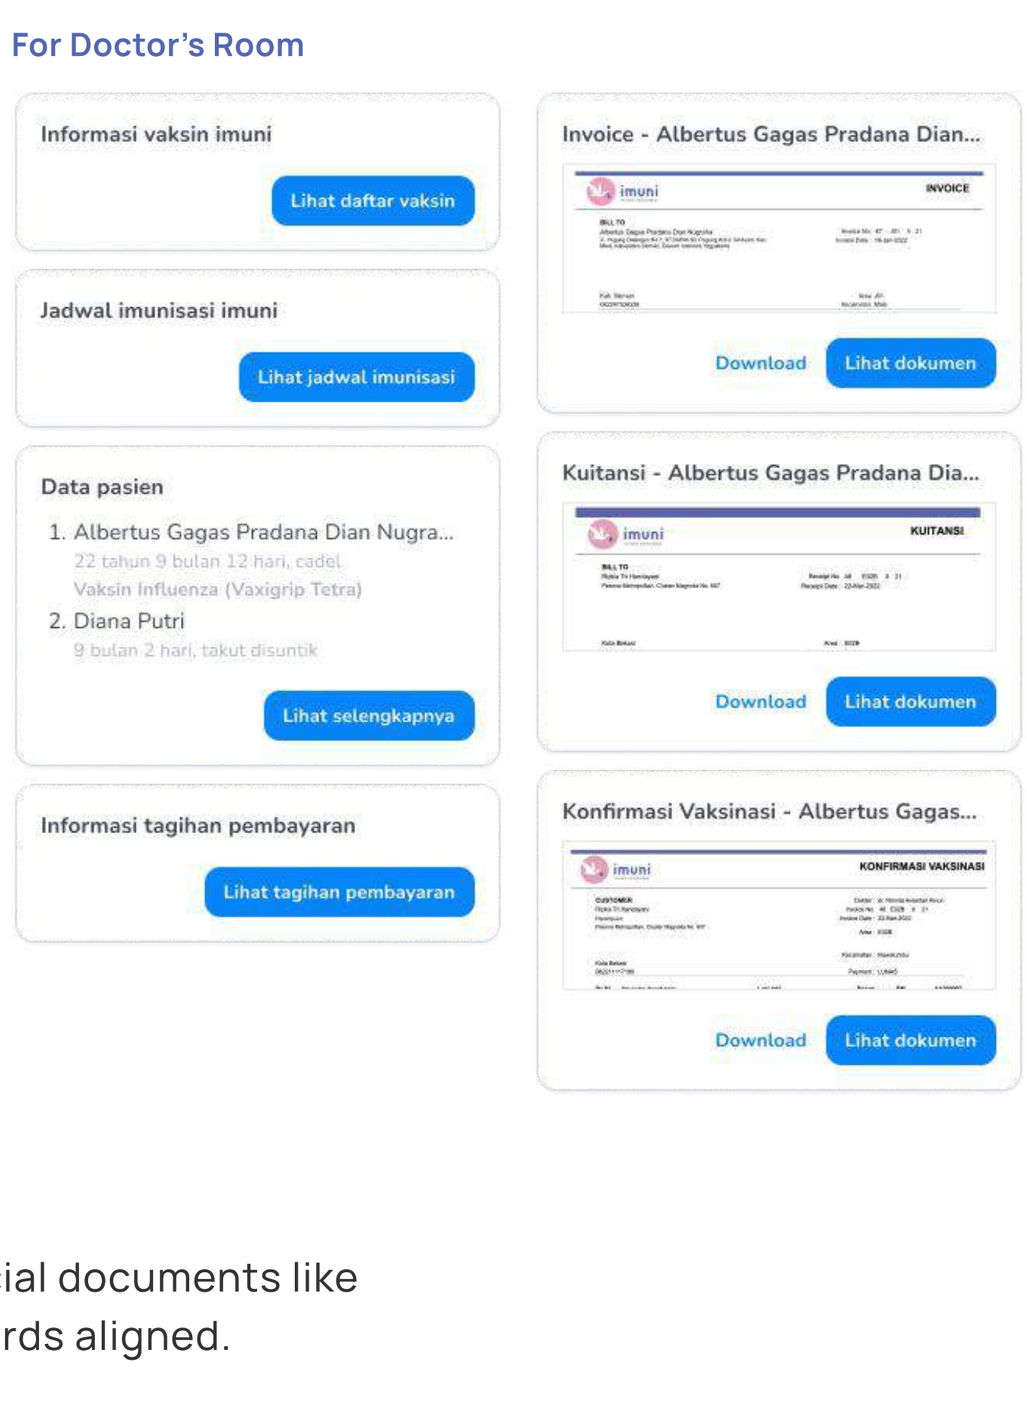
To eliminate fragmented communication, I created a unified chat feature with distinct rooms for medical and payment support. This ensures clarity, reduces user confusion, and consolidates all messaging in one place.

2. Dedicated Chat Bubbles Chat Communication

For Finance Team’s Room



For Doctor’s Room



Dedicated chat bubbles handle confirmations, vaccine info, and official documents like invoices and receipts, reducing miscommunication and keeping records aligned.

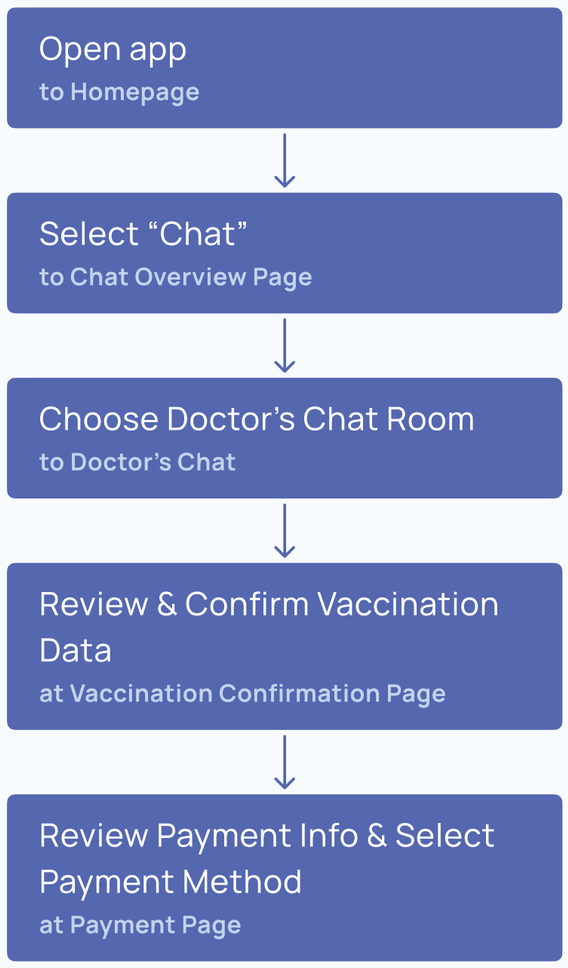
Results

Highlight 3: Designed a multi-method payment system

Previously, users had to manually transfer payments, making the process inconvenient.

By designing a flexible, multi-channel payment solution integrated with a payment gateway, users can now pay via virtual accounts, credit cards, or paylater—streamlining the process.

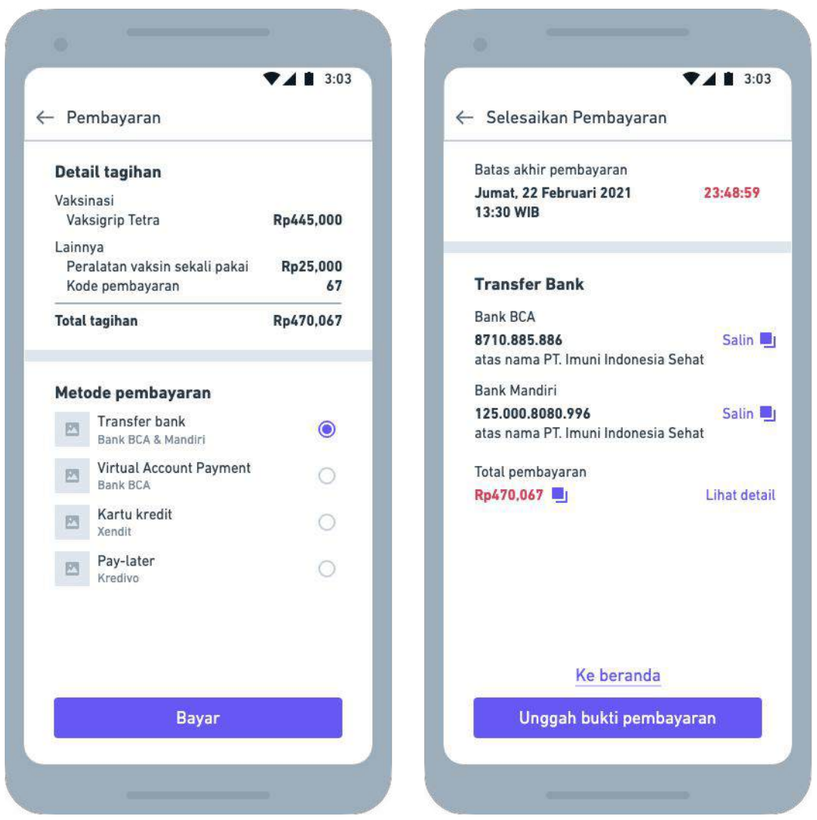
User Flow



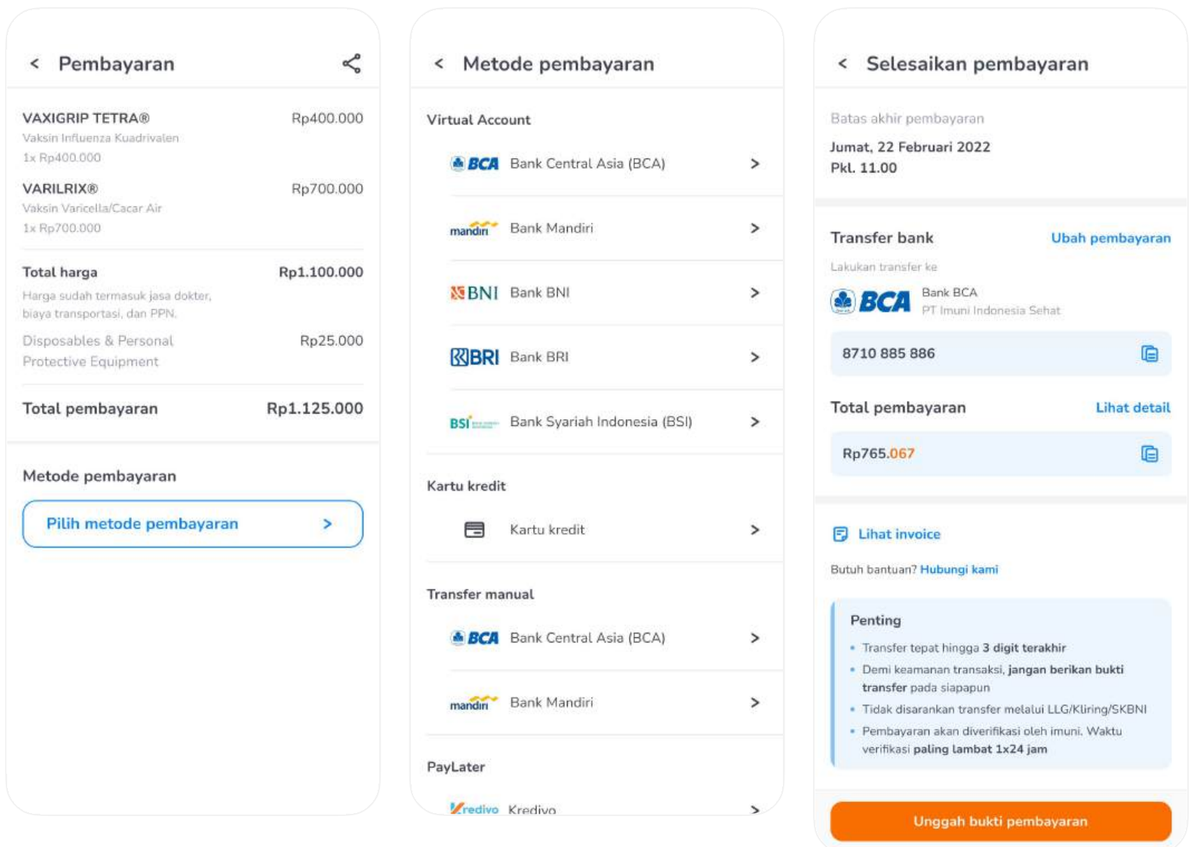
Design process

Payment

Wireframe



Hi-fi design



The payment feature addresses the inflexibility of manual bank transfers, which were inconvenient for users, especially with high vaccination bills.

The app now offers a variety of payment options through a payment gateway, including virtual accounts (VA), credit cards (CC), and paylater. This flexibility makes payments more convenient and user-friendly.

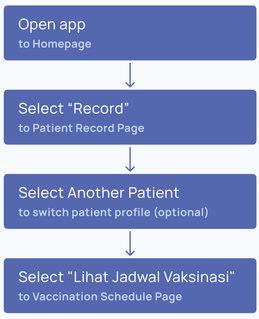
Results

Highlight 4: Digital vaccination records

The digital vaccination records feature addresses the impracticality and vulnerability of physical vaccination booklets and Google Sheets, which were prone to damage, loss, and other issues.

Storing data in the app ensures automatic updates and easy access for users, eliminating concerns about damage or loss. This also allows the imuni team, including doctors, to effortlessly revisit patient records, enhancing efficiency and reliability.

User Flow



Design process

Vaccination records

The digital vaccination records feature offers a more practical and reliable solution by storing data within the app. Here's how it addresses key issues:

Automatic updates

Records update instantly after every vaccination.

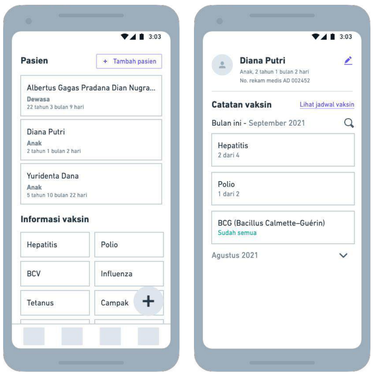
Easy access

Vaccination history available anytime, worry-free.

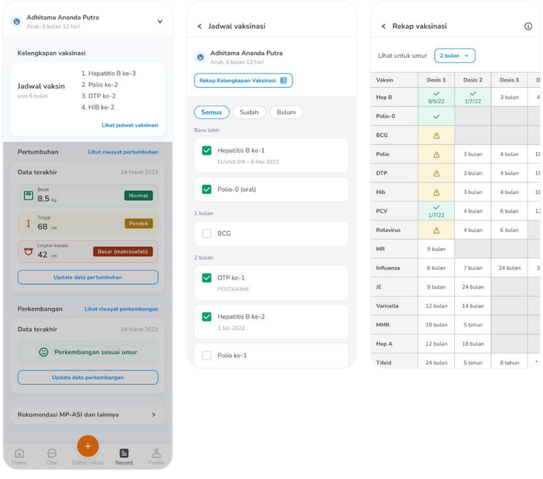
Effortless management

Doctors can review and manage records quickly.

Wireframe

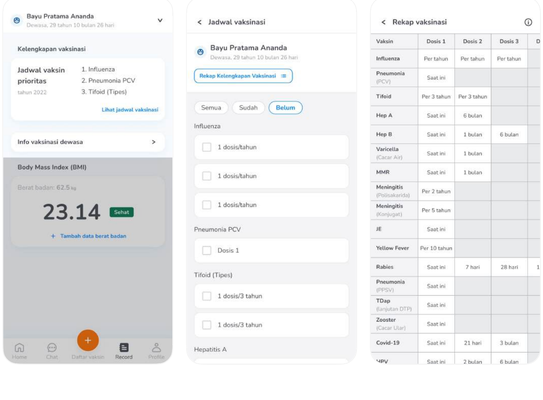


Hi-fi design (for children)



- **Record page:**
  Displays information about required vaccinations based on the child's current age.
- **Vaccination schedule page:**
  Shows the patient's vaccination schedule and indicates whether the vaccination has been administered.
- **Vaccination summary page:**
  Provides a summary of all vaccinations received by the patient.

Hi-fi design (for adults)



- **Record page:**
  Displays information about recommended vaccinations based on the patient's gender.
- **Adult vaccination information page:**
  Shows recommended vaccinations and indicates whether the vaccination has been administered
- **Vaccination summary page:**
  Provides a summary of all vaccinations received by the patient.

These features collectively ensure a comprehensive and user-friendly digital vaccination record system, enhancing the overall experience for both users and the imuni team.

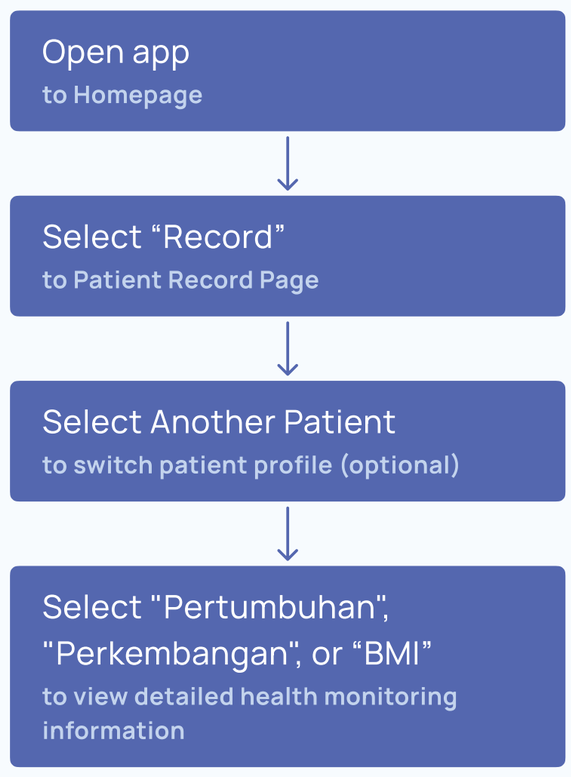
Results

Highlight 5: Health Monitoring (for both children and adults)

For children under 20 years old, this feature includes monitoring of vaccinations, growth, and development, with additional parenting tips.

For adults, it offers health check features, including tracking vaccination completeness and BMI self-monitoring, catering to the health needs of the entire family.

User Flow

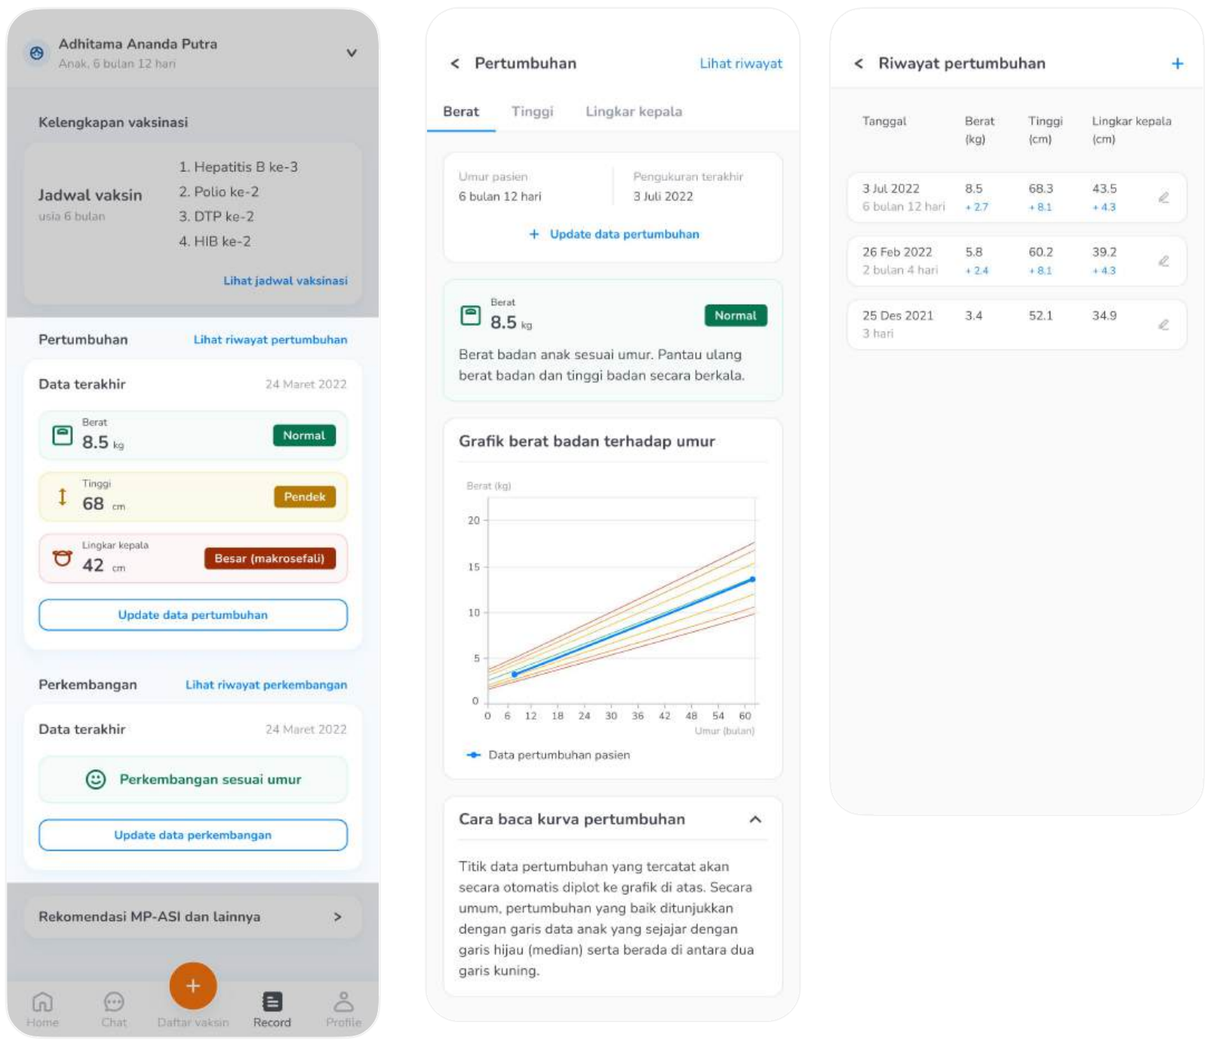


Design process

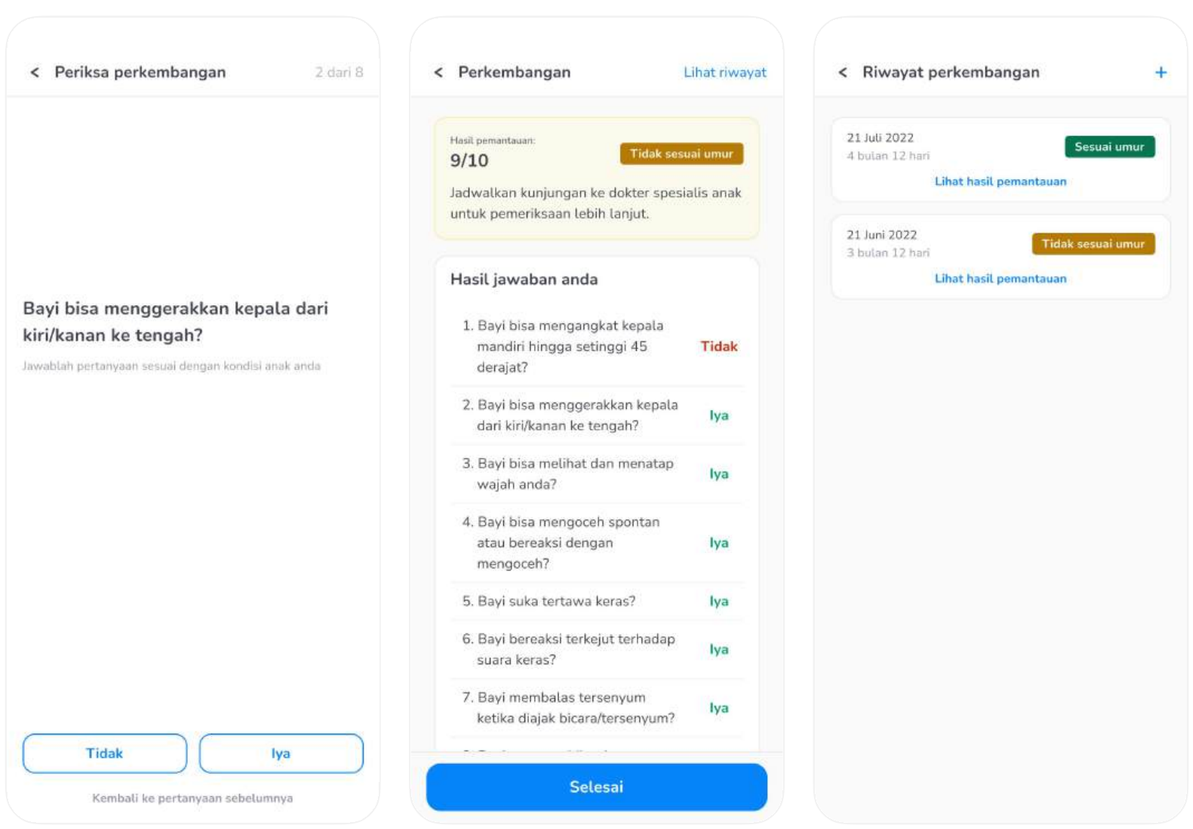
Children growth & development monitoring

Hi-fi design

Growth monitoring



Development monitoring



As an additional value for our users, we have included a feature for monitoring the growth and development of children:

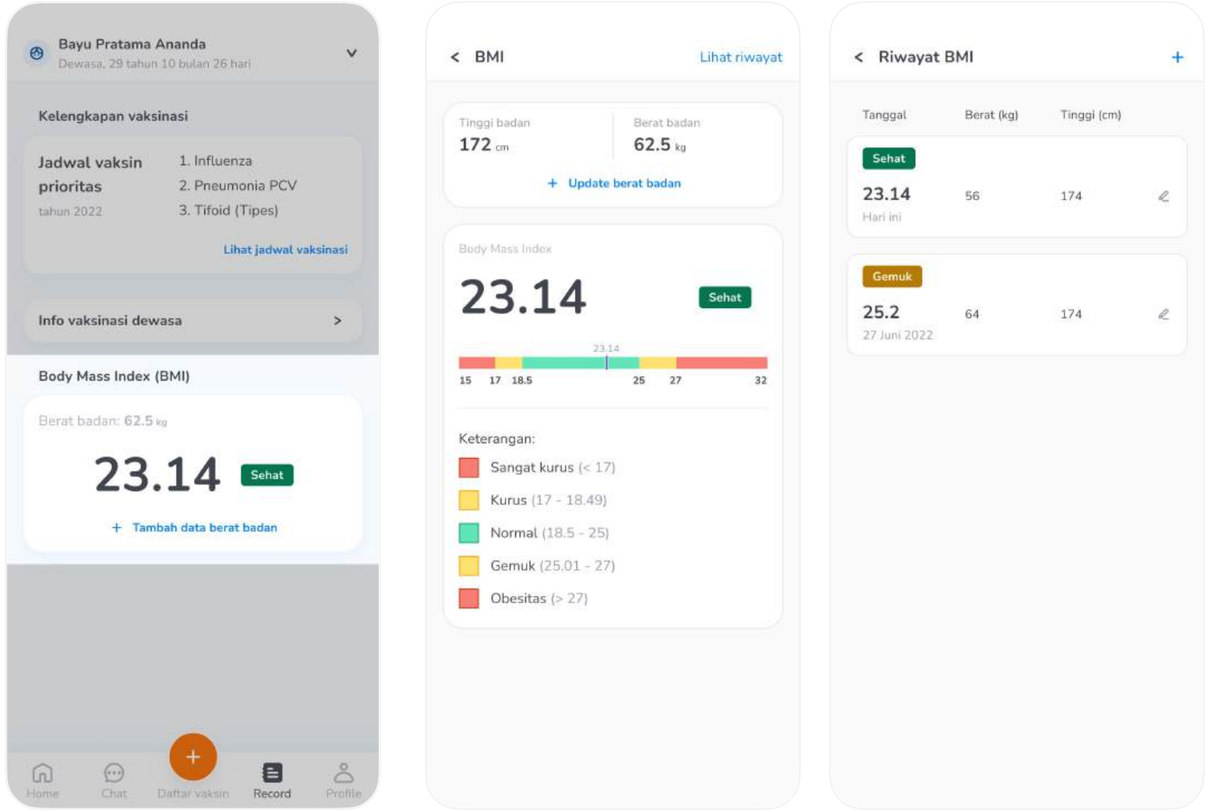
1. **Growth monitoring:**
   Users can input data such as weight, height, and head circumference. This data is compared with standards from our doctors to determine if the child's growth is within the normal range for their age.
2. **Development monitoring:**
   Users answer questions about their child's developmental milestones. The answers will determine if the child is achieving motor skills and developmental milestones appropriate for their age.

These features offer parents valuable insights into their child's growth and development, allowing them to monitor their child's health and seek immediate medical advice if necessary.

Adults health monitoring

Hi-fi design

(BMI monitoring)



For adults, we have included a health monitoring feature focused on BMI (Body Mass Index) checks. Users can enter their weight and height to calculate their BMI and determine if they have an ideal weight based on their BMI score.

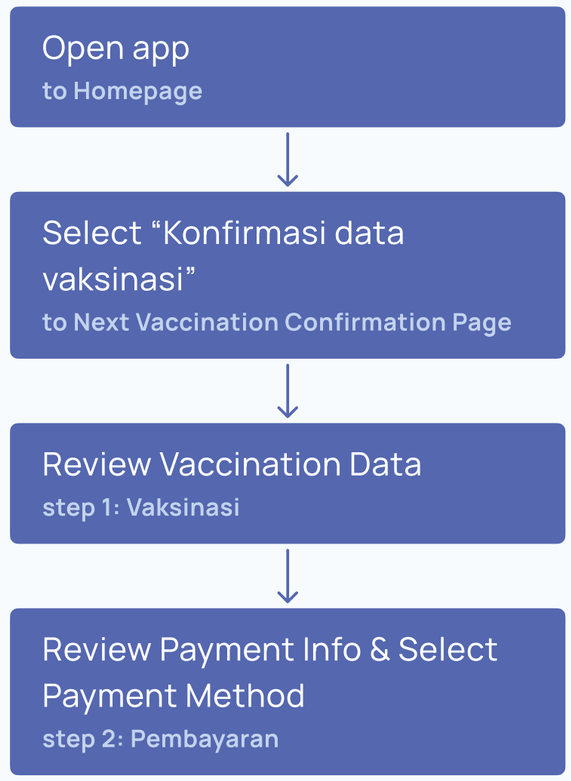
Results

Highlight 6: Streamlined next vaccination reminders

Previously, we manually reminded users a week before their next vaccination, requiring labor-intensive re-registration for each patient.

Our app's dedicated next vaccination reminder feature automates this process, allowing users to input details, review, and directly proceed with payments, significantly simplifying the process.

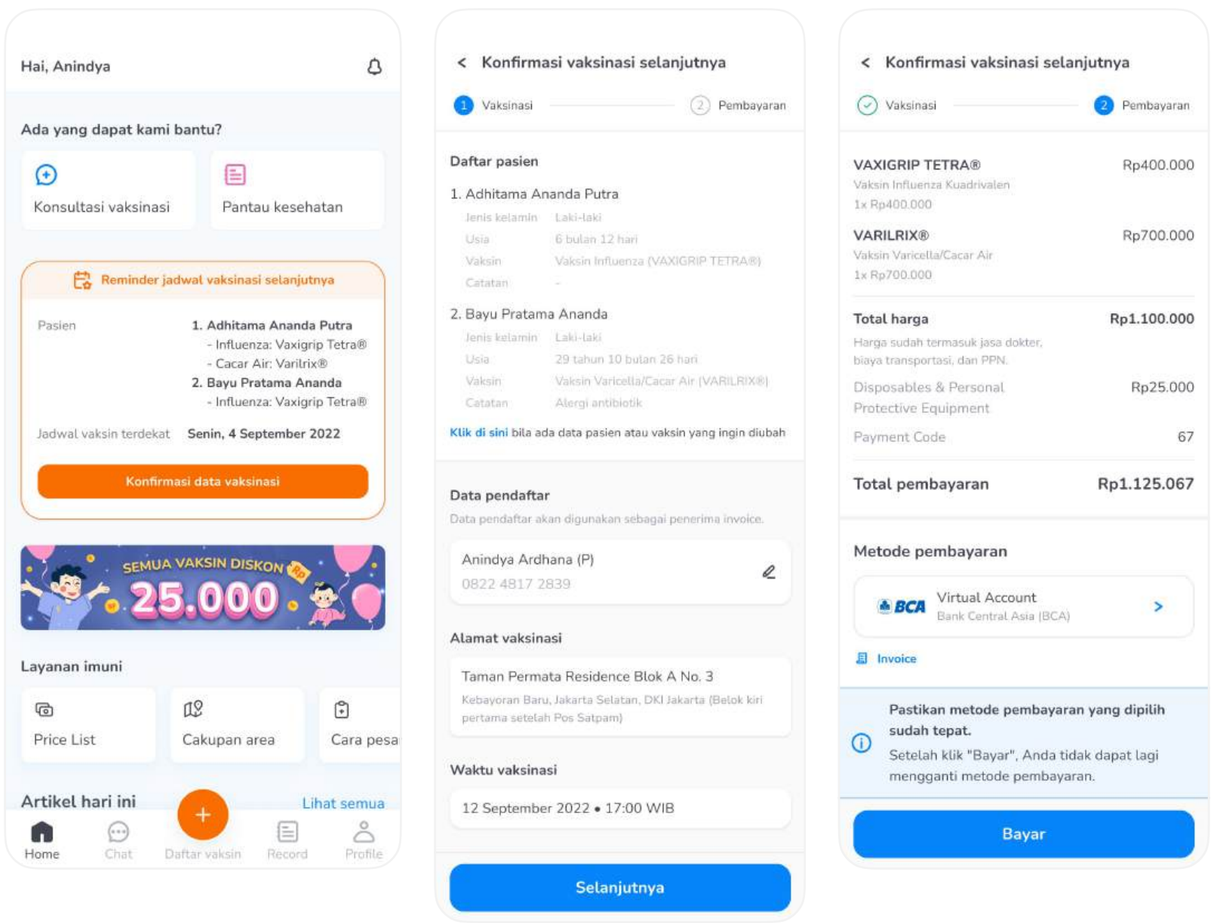
User Flow



Design process

Next vaccination reminders

Hi-fi design



For each upcoming vaccination, the doctor inputs the details of the patients who need to be vaccinated and the specific vaccines required, based on the agreement made during the previous visit. This pre-filled information allows users to simply confirm the details: the registrant, vaccination address, and the schedule.

Once all the necessary information is confirmed and complete, users can review the data and proceed to payment. This design reduces the effort from users, ensuring a more efficient process for scheduling and confirming their next vaccination appointment.

Results

Highlight 7: Homepage

The homepage of the app is designed to highlight all user needs and display important information accessibly.

Design process

Homepage

Wireframe

Hi-fi design

Homepage allows users to easily access imuni's core services, such as vaccination consultations with doctors and patient health monitoring. Users can also view real-time updates on their vaccination process from our homepage.

Additionally, our homepage features the latest information about imuni, including available promotions. It also provides details about our various services, ensuring our users are aware of all their options. Finally, our homepage includes health-related articles.

Achievement

Achieved **80% of our sales revenue** through our new digital system

As a result of our innovative digital system (which consists of our user mobile app and dashboard), we were able to achieve 80% of revenue through digital channels.

Other impacts

Our initiative to create an integrated digital system, consisting of a mobile app for users and a back-office web for our team, has led to several significant impacts:

1. **Better onboarding**

   Faster and more user-friendly new user registration, resulting in rapid growth of our users and orders.

2. **Efficient order processing**

   Centralized vaccination records have reduced errors and data loss, making the order processing more efficient.

3. **Scalability**

   Designed for our growing user base & order volume, this system able to accommodating our expanding operations.

4. **Data-informed decision making**

   The system provides valuable insights, allowing us to make data-driven improvements in our services and user engagement strategies.

Things I’ve learned from this project

1. **Interdisciplinary collaboration**

   Learned how to communicate effectively across disciplines and leverage diverse expertise to create stronger solutions.

2. **Alignment with developers**

   Built mutual understanding with the tech team, aligning goals to ensure both quality and feasibility of the product.

3. **Efficient customer journey**

   Designed streamlined and flexible user flows that improved usability across different customer scenarios.

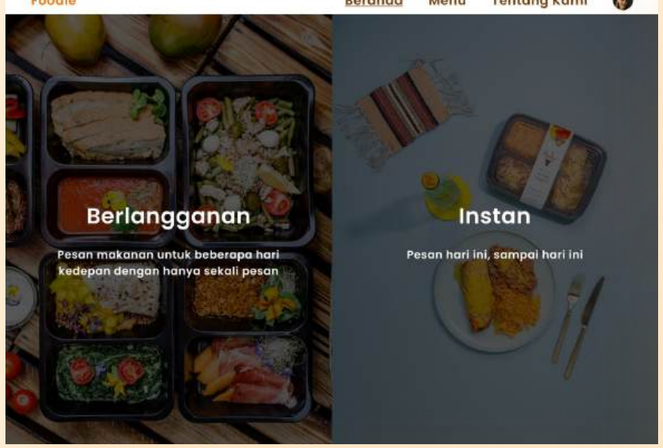
Foodie

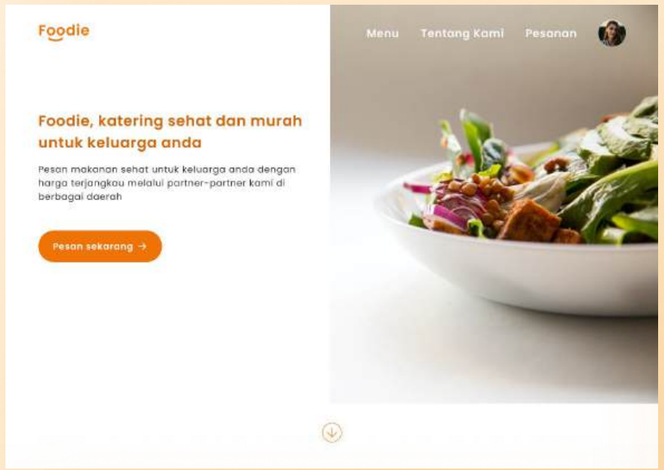
2021 - Website

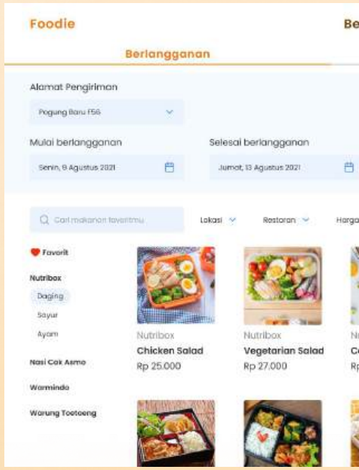
Summary:

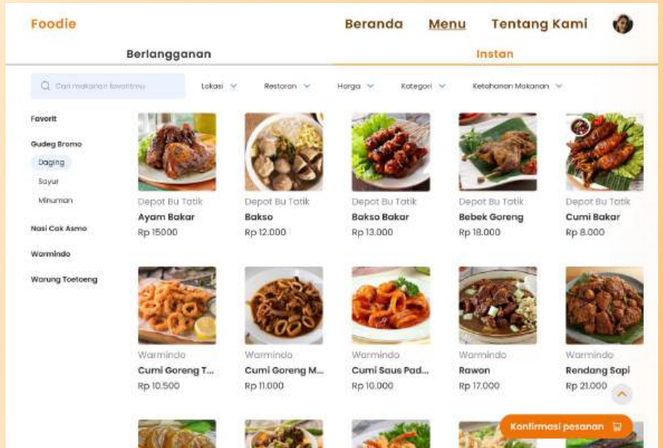
For working moms during Covid-19, every day felt like a balancing act between office deadlines and preparing nutritious, varied meals at home. Many felt exhausted and overwhelmed, signaling the need for a service that could simplify meal preparation while staying flexible, cost-effective, and family-friendly.

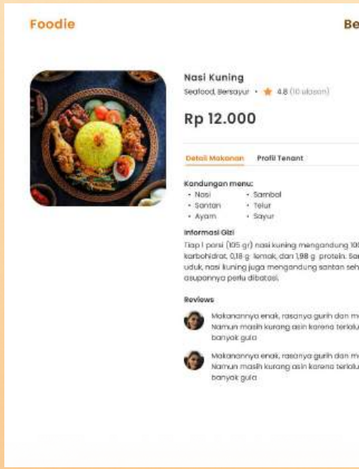
This is a project for SYNRGY Academy bootcamp.











Project overview

This is a project for SYNRGY Academy, a bootcamp organized by Binar Academy and scholarship program from BCA. We were challenged to create a website within 2 weeks.

The grand theme was about:
Help parents to be better in workload management doing both school and work from home

What happened?

We believe that during this lockdown period, working moms are experiencing challenges in providing healthy meals for their families.

Why?

They have to put in extra effort to plan the meals they will serve, prepare them for their family, all while also completing their own office work.

→ **In short, they are overloaded**

Design Process

Solving the right problem:

1. **Emphatize**
   - User interview
   - Desk research
2. **Define**
   - Problem statement

Solving the right problem:

3. **Ideate**
   - User flow
   - Wireframe
4. **Create**
   - User interface design
   - Prototyping
5. **Test**
   - Usability testing
   - Design iteration

User Interview

- Interviews were conducted via WhatsApp phone calls.
- Each interview runs for ± 1 hour, with total 5 participants.

Participant criteria:

- WFH mom who has elementary to junior high school children.
- They have used catering service.
- Their children are doing school from home.

Key points on our questions:

1. Behaviour
2. Pain
3. Gain
4. Motivations
5. Hope
6. Needs
7. Suggestion

Competitive Analysis

Competitors / Analysis	Yellow fit	Kulina	Homade
Key products	• Catering (1 batch/week) • Free consultation with nutritionist • Designed with diet program menu • Refund (if diet program didn't work)	• Options subscribe order • Provide large-quantities order and pre-order system • Provide catering for corporation	• Flexible order system • Provide realistic preview for each menu • Provide most popular menu in landing page
How to order	• Website	• Mobile app	• Website
Strengths	• Emphasize on their healthy menu • Detailed information about their menu	• Clear order flow • Appealing testimonials and their services' benefits on landing page	• Menus are appealing, on-point with the photos • Provide many options for order
Weaknesses	• Unclear CTA • Landing page is too focused on ads	• Can't place order on their website	• Can't make a subscription order

The root problem based on our findings:

Most WFH moms do not have much time to cook for her family.

User Persona

Demographics

Age : 43
Work : Karyawan
Status : Menikah
Location : Jakarta
Character : Sibuk

Personality

Introvert — Extrovert

Positive feedback

1. **Effective landing page**
   The top-selling items and testimonials on the landing page are convincing.
2. **Detailed food descriptions**
   The food descriptions provide thorough information.
3. **Optimized for food ordering**
   Speeds up the ordering process, especially with the recommendations & well-organized menu.
4. **Attractive idea**
   The concept seems appealing & beneficial for WFH moms.

Negative feedback

1. **Highlight & clarify key feature**
   The key feature (subscription) needs better visibility & clearer explanations about how it works.
2. **Expand catering reach**
   We should open for catering expansion opportunities, such as open partnerships.
3. **Improve tenant profiles**
   Detailed tenant profiles are crucial for building consumer trust.
4. **Increase flexibility of catering schedule**
   The catering schedule selection process should be more flexible & user-friendly.

Key Points

Landing Page

This landing page is the first page that users will see (especially for those who are new).

The purpose of this page is to effectively showcase the selling point through an attractive design.

Apa kata pelanggan kami mengenai Foodie?

“

Sangat membantu saya saat pandemi!

Saya harus WFH dan tidak sempat menyiapkan makanan untuk keluarga. Dengan pelayanan ramah dan kualitas makanan terjamin, Foodie telah membantu saya. Terima kasih Foodie!

Maya Christanty, 48 th

“

Makanan enak tapi tetap sehat!

Anak-anak saya sangat suka setiap saya memesan makanan di Foodie. Katanya enak, padahal dia biasanya tidak suka sayur. Terima kasih telah membantu saya!

Lina Alfiani, 57 th

“

Memudahkan kami makan sehari-hari!

Foodie menyediakan pembelian makanan secara praktis! Saya bisa memesan instan maupun berlangganan sesuai kebutuhan kami! Ga nyesel kalo beli disini.

Mirza Putri, 53 th

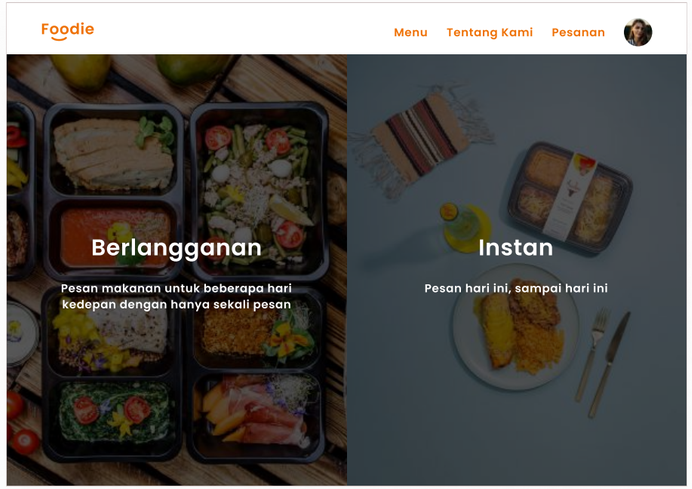
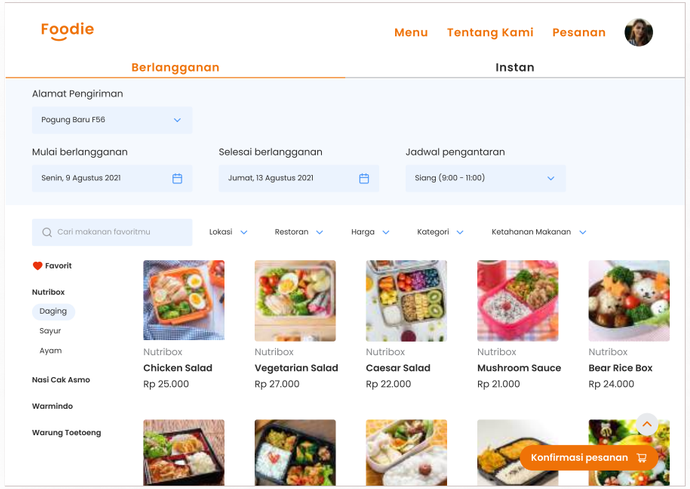
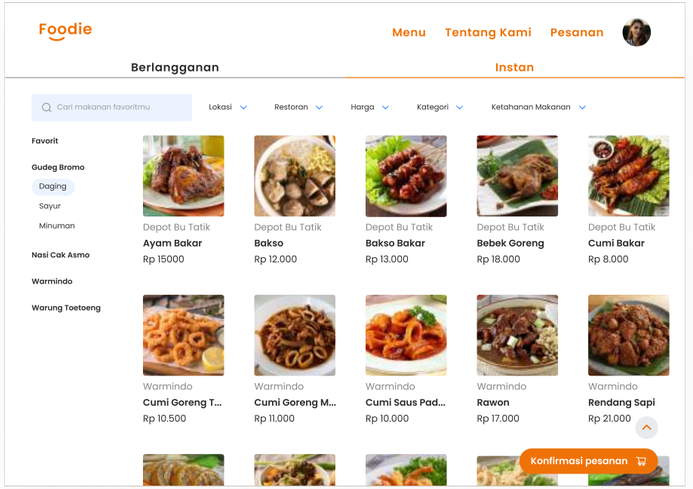
Key Points - Menu







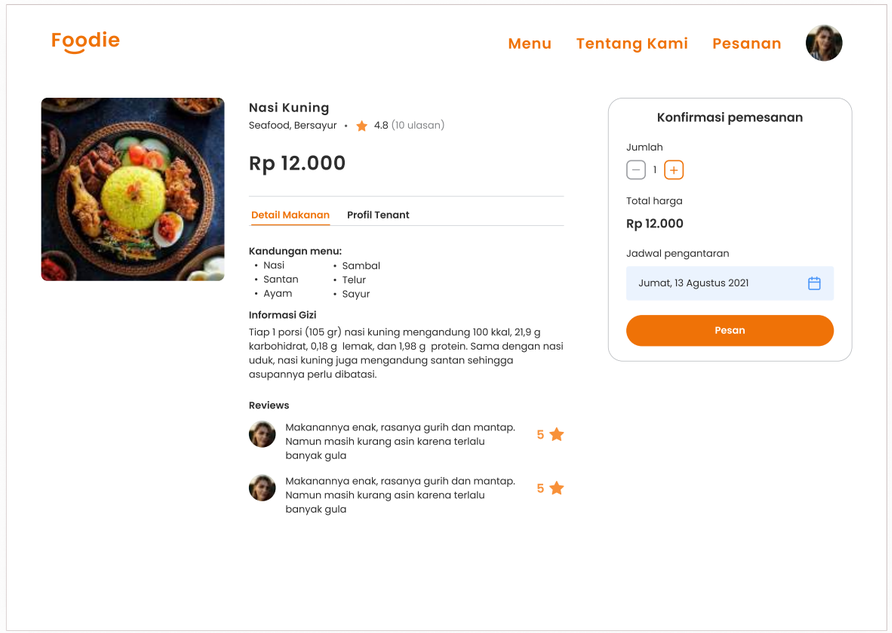
The main value of our catering web is the ability to order by subscription. Our goal is to make the subscription ordering process as simple and clear as possible.

There are 2 main reasons why users use our products:

- to start a subscription with our catering service
- to place an instant order

That's why our menu is divided into 2 main sections: instant and subscription order menu.

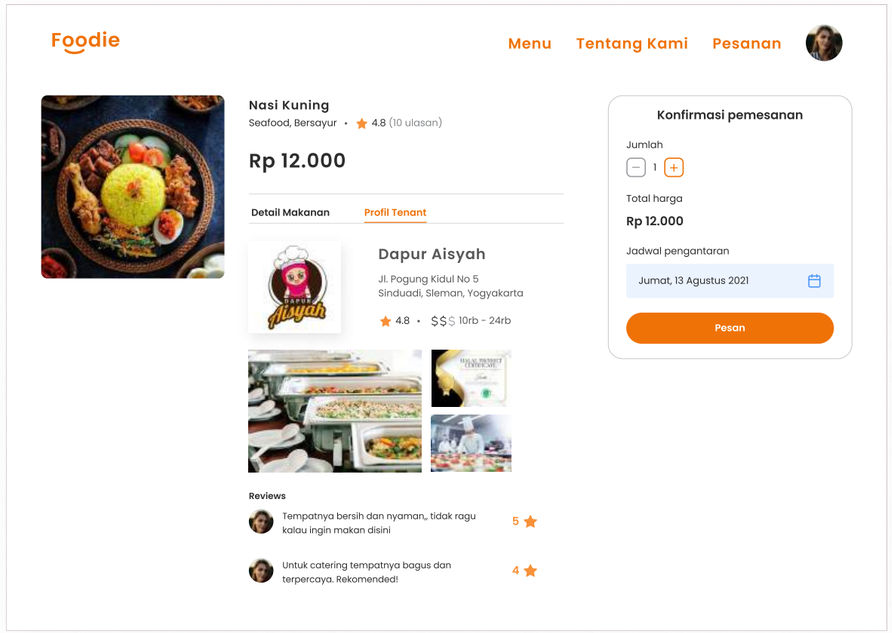
Key Points - Menu Description

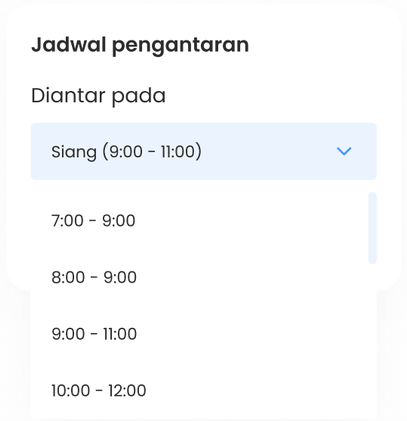


Our target users are career women who work from home and have children.

To improve our users' understanding of the menus and enable them to make informed choices, we created a menu detail page that is linked to the merchant profile. With this approach, our users will have an easier time accessing more information.

Key Points - Tenant Profile

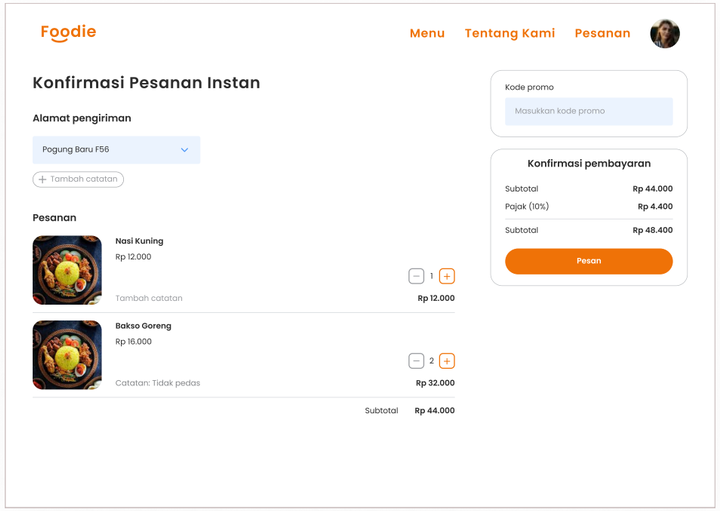


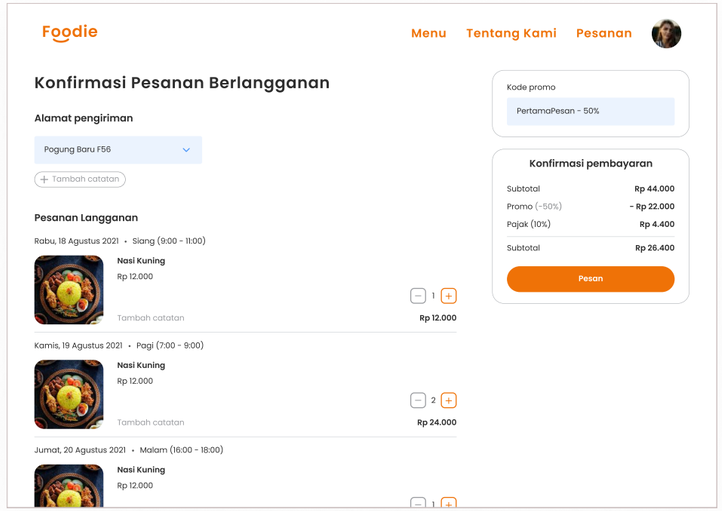


This page provides information about restaurants that serve the foods our users are interested in.

With this information, our users will feel more at ease when ordering from our website.

Key Points - Order Confirmation





The aim of this page is to present the information in a clear & easy-to-understand format, particularly for users who are ordering menus with the subscription feature.

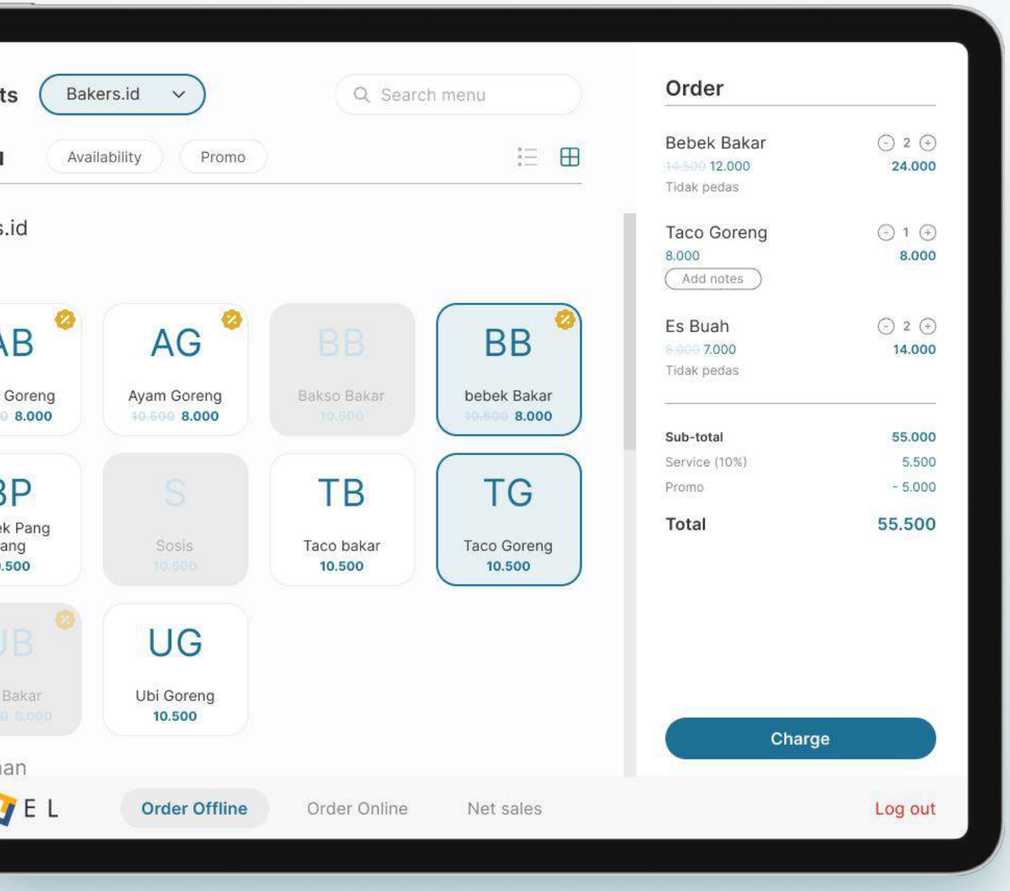
Takeaways

What did we learn?

1. Using an iterative design process enables us to come up with better ideas and release best possible product that meet our users' need.

2. Developer reviews and feedback are crucial in testing and refining our solutions, in order to improve the quality of our product.

3. Challenging your ideas, solutions, and designs on a regular basis can help you uncover a multitude of previously unknown problems.



Pazel Cloud

2021 - Multi-platform (web, tablet & phone)

Role: UI/UX Designer (Freelance)

Stakeholders: team lead & company C-level

Summary:

Designed a comprehensive POS system for Pazel Group as the central hub for order management. The platform streamlines menu updates, inventory control, and sales tracking while ensuring seamless order processing. It not only optimizes daily operations and enhances customer service, but also equips the team with data-driven insights for smarter decision-making.

Definition of Point of Sale (POS) system:

A system that accommodates the processing & recording of transactions between a company and their consumers, at the time in which goods and/or services are purchased

My Design Process

1. **Research & define**

   I start by obtaining a clear project brief from Pazel Group and gather relevant data to identify challenges.

2. **Ideate & design**

   Using the insights gathered, I brainstorm solutions and design proposals aligned with the project's goals.

3. **Review & validation**

   Pazel Group reviews my proposals to ensure they meet expectations, and we assess the feasibility of development.

User Research

In-depth interview

- 2 respondents are cashiers
- 2 respondents are tenant managers
- 1 respondent is a Pazel Group Tech Lead

Objective

- To find out how Pazel Group has been working all this time
- To know stakeholder’s motives from this project
- To understand respondents expectations of the POS system

Result

In the fast-paced FnB industry, staying organized, especially during peak hours, is critical. Long shifts for cashier staff using an inadequate application can increase the risk of human errors and lead to data inaccuracies.

Design Directions

By having a centralized database POS system, they can quickly assign the order to a customer, store data with minimal effort and they can optimize their business.

Therefore those who will be using this system are:

1. Cashier
2. Tenant manager
3. Tenant owner
4. Back office

Competitive Analysis

Objective

- To gain a deeper understanding on how the POS system works
- To find out strengths & weaknesses from our competitors
- To find out another design pattern and insight to design this product

Results

- The majority of POS systems only provide 2 apps: for cashiers and tenant owners
- POS system mainly focused on 2 things:
  - Needs of ordering and transactions (for cashier)
  - Tenant management (for tenant owner)

Product Specifications

1. **Cashier app (Android - tablet)**

   This application aims to help cashiers to handle customer orders and transactions.

2. **Tenant Manager app (Android - phone)**

   This application aims to help tenant managers to manage available menus and incoming orders.

3. **Tenant Owner app (Android - phone)**

   This application aims to enable tenant managers to view and analyze their tenant sales reports.

4. **Back-office web (website)**

   This website aims to manage Pazel Group internal data.
